Editorial Information

SIXTEEN BITS (ISSN 8017-0991)
is published monthly by the
PC Users Group (ACT) Inc
PO Box 42
Belconnen ACT 2616
Australia

We welcome submissions of articles from members of the Group. If you are interested in writing please contact the Managing Editor and ask for a copy of our '*SIXTEEN BITS - Guidelines for Authors*' (also available on the BBS in General file area (1) as AUTHORS.TXT).

Correspondence and material for review or publication should be forwarded, preferably as a plain text file with separate PCX/BMP graphic files, by the deadline specified, to the Editor as follows:

- By email to pcug.editor@pcug.org.au
- By BBS file - upload to the *Articles for 16Bits* file area (30) of the PCUG Bulletin Board on (06) 253 4933
- By BBS mail - leave a message in the *PCUG Editor* message area
- By fax to (06) 253 4922 (100 words or less)
- By mail to above address (100 words or less)

Anonymous contributions will not be published, though name and address can be withheld from publication on request. Disks are not returned unless requested by the author.

Advertising in SIXTEEN BITS

SIXTEEN BITS is a unique and powerful medium for reaching the thoughtful decision makers in the ACT area. Our circulation exceeds 3500 copies each month, with multiple readership exceeding 4800. Many copies are retained by members for future reference. The advertising deadline is normally the first Friday of the month of publication.

Advertising options include

- **Cover ads**
- **Display ads**
- **Special inserts**
- **One-off mailing lists**

Regular advertisers receive discount vouchers to pay for any future advertising with *SIXTEEN BITS* (subject to account being in order). Every 12th consecutive ad placed is free. Please contact the Advertising Manager, Ken Livingston, on (06) 282 2536 for further information.

Main Meeting

Main meetings are held 7.00pm for 7.30pm, *usually* on the last Monday of every month at Manning Clark Theatre 1, Crisp Building Australian National University.

Editor's Desk Top

Darrell Burkey, Managing Editor

One of the things I like best about being the Editor of *Sixteen Bits* is that I get a chance to read the articles first. If you find that interesting, the editorial team is always looking for help and Petra's merry band of staffers are next in line to see the magazine, hint hint.

This month I was struck by the varied use we all put our computers to. Communications, entertainment, education and so much more. I hope you enjoy reading what the members are up to as much as I have. This is amazing and exciting technology we are using and the PC User Group seems to cover it all.

This brings up an interesting issue... "What do you want?" I have had the opportunity over the last year to be far more active in the group than usual and have made

a point to ask questions and listen. Even so, those of us involved in projects still need as much feedback as we can get. Do you find what we are printing interesting and useful? What are your favourite things about the journal? What don't you like? Does *Sixteen Bits* give you the information about the PCUG that you want? We simply will not know unless you take the time to tell us.

Sixteen Bits Online seems to be attracting some attention and if you have ever used Adobe Acrobat files you will know why. It's simply an amazing way to deliver publications and information electronically. We are experiencing problems with a new feature of the software that allows your online browser

to use the program as a plug-in application and then deliver pages to you one at a time rather than requiring you to download an entire file before viewing it. We've run in to a bit of a brick wall support-wise so it may take use some time to get it working properly. Meanwhile, there are instructions on the site on how you can download the file and read it offline should you have troubles using it online. If all of this paragraph confuses you because you are new to the 'net don't despair, just get yourself to a Special Interest Group or grab someone at the Centre to help you out. Believe me, there are a lot of us confused about various things and many times the 'User Helping User' approach is one of the most effective.

President's Letter

Ann Byrne, President

The month of February started frantically. A lot of people were caught unawares despite having received email about the adjustments to their accounts from February 1st. This resulted in the Centre being incredibly busy the last week in January and the first week in February. Thanks must go to the following volunteers who coped so admirably at the front desk and those that arrived and saw how busy it was and stayed around to help: Brian Williamson, Matthew Wooton, Allan Mikkelsen, Darrell Burkey, Nhan Tran and of course we mustn't forget Petra who dealt with the rush so capably on Friday 31st Jan.

We now have a Communications Policy Team (CPT) who will be putting together a PCUG communications policy. As the policy is to represent the views of the membership, the team will be canvassing you for your opinions. Ian Johnston will outline more about what's happening at our next monthly meeting.

Ken Livingston was nominated to represent the PCUG on the ACT Government's Online Services Advisory Group.

The annual ACT Alive is on again on Monday 17th March. If you can spare an hour or two to man the stand it would be much appreciated. The more volunteers the easier the workload. Please call Ken Livingston if you can help.

There will be a special meeting in April before the main meeting to alter rules 17(1)a,b,c.

This will enable you the members to be given more time to digest who is standing for the Committee. On that note may I urge you to start giving some thought to nominating.

The group will need a new Treasurer this year, Hugh Alston gave us fair warning when he took the job on that it would only be for two years. The Committee is considering outsourcing the day to day

accounting work leaving the Treasurer free to oversee the financial situation of the group and develop budgets as well as forward planning. We hope this initiative will encourage some of our members who have an interest in the field to come forward.

While talking about volunteers may I commend the Editorial team on the great job they are doing with *Sixteen Bits*. Each copy seems to get better than the last. There is now a vacancy for an Assistant Editor, so if you have a flair for layout, would like to be among the first to see the new edition and are a glutton for work and chocolate or coffee, please contact the Editor.

The Third Annual PCUG Quiz Night will be held Tuesday, April 1st at the Canberra Yacht Club. Nibbles, prizes and trivia await! Why not join in the fun? Entry fee is \$5. Contact Ken Livingston to book your table.

Letters

From our readers...

For almost three years *BitStorm* in the Canberra Centre has been a consistent supporter of the Group. Every month they came through with a game to review, which became a door prize at our monthly meetings and they also offered a discount on the title reviewed. Over the years their generosity has amounted to thousands of dollars worth of software donated to the Group. The benefit was supposed to be mutual in that sponsorship, it was hoped, would bring User's Group members into *BitStorm* to buy the game that had been reviewed in *Sixteen Bits*. Members have seen fit to buy fewer and fewer of the games on special each month, to the point where it is no longer feasible for *BitStorm* to support us with free software. However, *BitStorm* have kindly offered to continue to loan games for the Group to review.

Committee Report

30 November, 1996 - At a special meeting, the Committee approved the negotiation of a contract to acquire at least 256K bandwidth for TIP with an expenditure of up to \$131,000.

Shock, horror, the Committee did not have a meeting in December. Instead, we went out for a social dinner!

Financial report for December

PCUsers Group

December 96

Income	\$28,894
Expense	\$31,102
Balance at Bank	\$57,687

The Internet Project

December 96

Income	\$17,516
Expenditure	\$13,020
Balance at bank	\$93,656

As someone who has devoted many voluntary hours over the past few years to writing game reviews for *Sixteen Bits*, I think it is time to seek feedback from members as to whether they want games reviews in their magazine at all. Members need to take responsibility for the content of their magazine. If the decline in patronage of *BitStorm* is symptomatic of a declining interest in games reviews, it would be nice to get constructive feedback, so that the Editor can fill the column with something of greater interest to members. I would like to see a dialogue in this column, or maybe through e-mail to the Editor, with comment and suggestions, so that we can maximise the value of our voluntary labours and continue to improve our already world class magazine.

Alan Tebb

When I joined the Users Groups' Internet project I was given written instructions on how to connect my computer to the PCUG. I had no hope of coping with the notes and appealed to Mr Auer who reported my cry for help on the BBS. Mr Alois Shutt took two hours off to install TIP on my computer.

Then Mr Fry came and showed me how to email on Eudora step by step which was fantastic. He spent a lot of time with me.

Mr Nahn Tran came from the North to bring back my Start button and place it in the position to which I am used.

Last not least Mr Cook of the PCUG Centre showed me how to manage the Internet on Netscape through TIP.

I am most grateful for all this voluntary help. I believe the PCUG must be the most altruistic institution.

Elizabeth Ward

I have just received an e-mail from "The Internet Project Committee" stating I am to arbitrarily receive a deduction of advanced TIP access of around 150 hours!

This is access time that I paid for in good faith. That faith has been shoved back in my face as a penalty!!!

After spending around half my total access time in the last twelve months I find out that because I did the RIGHT thing and didn't over use my time on TIP I am penalised. Give me a break.

Not only that, but around ninety percent of the time I used this year was for the good of the group as editor and contributor to SIXTEEN BITS.

Is this part of a hidden agenda?

Does the committee and TIP Management WANT me to go somewhere else?

Do these people have interests that CLASH with the best interests of the group?

I don't know, maybe someone should ask them at the next General Meeting. May I should ask them what their outside interest are and if their might be some agenda that is keeping TIP from being the service it should be. After all, its yours and my membership fees that built this TIP, we own it.

Why the hell should we be penalised???

Not only that, how can the Treasurer now justify the annual report figures where it was claimed that unused TIP access time was the equivalent to CASH???

What would an independent auditor make of that?

Come on gang, take some interest in what is happening to your money.

Cliff Manley,

ex editor of SIXTEEN BITS

(see reply page 37)

Meet The Committee

Committee members can be found at most PCUG functions but are also available the last Saturday of each month from 2-4pm at the PCUG Centre. This time has been set aside specifically for members to have an opportunity to meet committee members and discuss any issues or answer any questions members may have. See you there.

Membership Notes

By Mike Burke
Membership Secretary

Welcome

To new members reading *SIXTEEN BITS* for the first time, welcome to the PC Users Group.

Continuing members should also check this column regularly because I am sure that there will be some little surprises from time to time, even for the most jaded of old hands.

Your Membership Card

Your membership card will be mailed to you as soon as possible after your application for membership, or renewal, has been processed. This will normally occur within one week of your receipt of your first issue of *SIXTEEN BITS*. Please be patient, however. There is only one print run of mailing and membership labels every month, and this normally occurs over the weekend immediately before the *SIXTEEN BITS* stuffing day (normally the third Monday in the month).

If I'm having a good week, there is a reasonable chance that membership cards and disks will be dispatched on the third Monday, and that will be my objective. All going well, you may actually receive your card and disk before *SIXTEEN BITS*. Once again, however, please be patient. Allow at least until the end of the month following the month in which you sent in your application for membership (or renewal) before querying the non-arrival of your card. (Indeed, I actually did have at least one good week in January, and the cards and new member disks should have beaten *SIXTEEN BITS* to the mailbox.)

Information Disk

At the same time, new members should also receive a disk containing information about the Group and its services. Please read the information on the disk carefully as you will find the answers to most of your questions there.

The disks will be updated at least annually, and will normally be produced with the text in two formats: a DOS .COM

file version that enables you to scroll through the document or select only the parts that currently interest you, and a WINDOWS Help File version.

I also intend to place both current versions in the appropriate areas on the BBS and TIP, so that members can regularly update their own records.

New Members Information Night

New members are especially urged to attend a New Members Information Night which is normally held at 7.30pm on the first Monday of the month (except January) at the PC Users Group Centre (see map page 3). These meetings are a chance for new and 'older' members (who are always welcome to attend) to meet with representatives of the Committee, to put names to faces, and to ask any questions that you may have about the Group and its activities. Tea and coffee are available, and the atmosphere is informal and friendly.

Main Meetings

Our main meetings, targeted at our general membership, are normally held monthly on the last Monday of the month. The date, venue and topic of the meeting always appear on the front cover of *SIXTEEN BITS* which is timed to arrive in your mail-box in the middle of the week before the next main meeting.

Main meetings are also advertised in the computing section of the *Canberra Times* on the day of the meeting. Anyone is welcome to attend these meetings—you do not need to be a member. For main meetings, we arrange guest speakers on a variety of topics throughout the year. As an added incentive, there are usually a couple of door prizes to be won. You've got to be in it to win it.

There is no main meeting in December.

Special Events

We also have some special events such as the 'Bring and Buy Night' at the Albert Hall in November, and an annual Quiz Night in April. You should read *SIXTEEN BITS* thoroughly as special events are publicised mainly through the magazine.

Annual General Meeting

The Annual General Meeting is held in September each year. Even if you are unable to attend Main Meetings regularly, members should make every effort to attend this Meeting at which office bearers for the ensuing 12 months are elected.

The 'Rules' and Other Good Stuff

It is sad but true that the PCUG is not entirely perfect. Contrary to nasty rumours occasionally circulated in low places, it is an organisation of humans, for humans managed, for the most part, by humans. Thus, it is not possible for all mistakes to be avoided all the time. Some problems are, however, easily avoided.

Occasionally, members complain that they were not aware that their membership was about to expire until too late. They resent that their copy of *SIXTEEN BITS* did not arrive, or that their access to the BBS and/or TIP has suddenly been suspended. They wonder why they were not sent an account or a timely reminder.

Sorry about that. Although TIP subscribers are sent an automated email message reminding them that their PCUG membership is about to expire, and BBS users are reminded whenever they log on as to how much time their membership has to run, there are no plans to send accounts or other express reminders to ordinary members. The additional cost of such a system would be prohibitive.

Please, watch your magazine address labels for the explicit warnings that appear with each label for the last three months of your membership. Renew early and be happy!

Next New Members' Night
3 March 1997
7.30pm
PCUG Centre
Northpoint Plaza, Belconnen

QuakeWorld

Prepare to be fragged...

By Andrew Clayton

I wrote about Quake in a recent edition of Sixteen Bits. At the time of writing that article, a new Quake phenomenon was just getting started. QuakeWorld.

QuakeWorld is a network only variant of Quake. The game itself is still the Quake of old; a first person 3-D maze shoot-em-up, with a variety of weapons at your disposal — read my Quake article for more information on that front, or check out <http://www.stomped.com> or <http://www.idsoftware.com> for more details.

Quake requires a Pentium Processor and a fast modem (28.8 or better) to run well. QuakeWorld requires Windows 95 or Windows NT! Yep, QuakeWorld will not run in MSDOS mode.

Quake was designed to run on networks, but the internet isn't really that great at dealing with real-time games, the inherent lag with packet-oriented long distance networks interfere with the mechanics of Quake in a very pronounced fashion.

QuakeWorld attempts to deal with the lag factor by making some assumptions about your actions, and the actions of the other players, reacting according to information as it arrives from the network.

This prediction effect can be enhanced by the end-user to provide a much smoother Quake playing experience, at the expense of accuracy in terms of where your opponents appear to be, and where your shots are actually going. The command to perform this magic is called pushlatency.

When playing Quake over the internet, you were wallowing around in a torpid daze, desperately trying to fire and move, getting nowhere, whilst the guy running the server experienced zero lag, and was

able to kill all and sundry, without any problem at all.

With dedicated Quake servers, the fairness increased, because everyone was affected by the lag, but the playability of the game over the internet was decidedly suspect.

A bunch of people who were into programming for Quake, got together with Quake's creators, **id Software**, and the result was QuakeWorld. When you play over the net in Quakeworld, you no longer suffer the stop-motion jerkyness that you would in

“QuakeWorld makes playing Quake over the internet a much more enjoyable and less frustrating experience...”

Quake over the Internet. You can walk, run and jump nearly as smoothly as you could in a stand-alone game, or in a LAN connected game. However, everything has its price, and in this case the cost is in predicting where the other player *actually* is. If you're on a lagged link, the representation you see of your opponent may be in a wildly different place to where he or she actually is according to the QuakeWorld server. The next time you get a packet update with players positions, your opponent might teleport to the other side of the room, or completely out of your sight!

QuakeWorld makes playing Quake over the internet a much more enjoyable and less frustrating experience, and lets you join in games with people without having to traipse over the countryside and get together with others with LAN cards and cables and the million and one hassles involved with setting up multiple computers in the one location.

Recently two dedicated Quake players, Rohan McElwee and Chris Scarvell got together the necessary hardware (with others donating hardware) to put a QuakeWorld server onto the The Internet Project's domain. This means that people with TIP advanced

internet accounts can connect to this server, and play Quake against each other! See the side box for more info on how to connect to this Quakeworld server.

QuakeWorld responsiveness is determined by the ping time between your computer and the QuakeWorld server. This ping time is the amount of time taken for a packet of information sent from your computer, to get to the other computer, and then get back to you. Usually this ping time is expressed in milliseconds (thousands of a second). The best ping times I could get on QuakeWorld servers on the real internet, were in the order of 300-350ms, with the average being 600ms and the really poor ones being 900ms or more.

On the local PCUG QuakeWorld server, I get ping times of 135-150ms, which is very VERY good. Using a pushlatency of -70 or so, I get performance that is very close to LAN connected speeds. I still can't beat people very well at Quake, but I'm no longer able to blame the lag for my woes.

The QuakeWorld client is free but unsupported. In order to use the client, you *must* have a registered copy of the full Quake game. The client is available from <http://www.bluesnews.com/>, and other Quake websites (e.g. www.stomped.com). In addition to the client, you should get the skins patches (these make your character in Quake appear different to other players).

The software is also available locally via anonymous FTP from the QuakeWorld server at TIP! Point your favourite FTP client to quake.tip.net.au, or 203.10.76.150, and do an anonymous login, and you'll find the various files you require; getting them from here is much much faster than getting them from the World Wide Web!

(...continued from page 8)

Once you have the QuakeWorld client, you should unzip it to your QUAKE directory. It should not overwrite any files. See the side box for information on how to get a connection with the PCUG's QuakeWorld server.

There are two programs you really need to worry about. The first is the QuakeWorld Client (qwcl.exe), the second is the QuakeWorld Front End (qw.exe). The Client is the program you actually play QuakeWorld in, the Front End is a nice GUI interface to the Client. The Client is command line driven and fairly raw in its interface, that's why the Front End was written. For those of you who have been following Quake utilities on the Internet, you will recognise the Front End as an enhanced version of the utility Qspy.

You can start playing QuakeWorld without using the Front End, follow the instructions in the side box. The Front End does do some nice things, though. It will ask the master server for a list of QuakeWorld servers connected, and order them by ping time (the lower, the better). It will also show at a glance who is playing on those servers, their scores, connection times and so on. The front end has some problems with dealing with new users though. I recommend using the instructions provided to start up your first QuakeWorld session.

The downside is it is a little tricky to set up, but does come with a very good help file (qw.hlp), so give it a go - you won't be disappointed!

QuakeWorld has inbuilt file transfer capability built in — if you connect to a QuakeWorld server that is running a Quake level that you don't have, then it will be transferred to you automatically (this could take quite a while if it is a big level). Similarly any sounds or skins that you are missing, will also be transferred. This is a much better way of organising things than the original Quake, where everyone had to have things on their machine to start with, otherwise their session would crash out!

QuakeWorld uses something called Master servers, which keep track of userids, and statistics as to how many kills a user has achieved, games played, things like that.

Each QuakeWorld master server has its own list of userids (so if you use a different master server, you have to create a new account). The default id Software master

server has been taken offline, awaiting a better replacement. The Master server suggested by Rohan and Chris has an ip address of 204.182.161.2. You will need to specify this one during invocation of the Client (eg. qwcl -master 204.182.161.2), or as an alternate master during login with the Front End.

This should be enough to get you started, so go dial in and start Quaking!

How To Use QUAKEWORLD!

To use QuakeWorld, you'll need an account on The Internet Project.

You will also need the quake world client and associated files: skinbase.zip qw_skins.zip qwcl1217.zip

You can find these files at the local anonymous FTP site, quake.tip.net.au, or use the IP address 203.10.76.150. You can also get them via the WWW from www.bluesnews.com in the Quake World section.

As there doesn't seem to be a QW Master Server in Australia (yet) we are using the Planet Quake Master Server at 204.182.161.2

(qwmaster.planetquake.com) and performance is very acceptable.

1. unzip all the required files as per directions included in the zip files
2. establish a ppp connection to PCUG
3. run qwcl.exe -master 204.182.161.2

Quake Console appears (do everything from here)

4. type newuser xxx where xxx = your password (write down your password) master responds with your userid is ##### (write down your userid)

5. type userid #####

6. type password xxx

7. type setinfo (to view your settings)

8. type connect 203.10.76.150

NB : Step 4 is only done the first time you connect. Skip it after you have a valid userid.

PS: You can change your settings by issuing console commands like this setinfo name Terminator setinfo skin ancients setinfo topcolor 3

By the way, if the master server complains that the name you try to set is already in use, you will have to pick another name. Every name on the master server is unique. For example, don't try to set your name to FunkeyMonkey (Rohan) or Cat (Chris), as these have already been taken.

You can also connect to a different level by using port 27500, eg.

connect 203.10.76.150:27500

In fact, we usually have another server running on port 27550, so for bonus points, try connecting to it!

If you have questions, pose them in TIP.GENERAL, and someone should be able to assist you.

1997 GROLIER MULTIMEDIA ENCYCLOPEDIA

A review by Alan Tebb

The transition in product development from the first Grolier encyclopaedia I bought (1995 version), to the current 1997 version 9M, has been an achievement of considerable merit. If your only contact with the Grolier encyclopaedia has been with one of these early versions, I thoroughly recommend you take a look at the 1997 version. The Grolier content and product designers have clearly been on a mission to be number one in this market segment and their hard work has paid off. The 1997 Grolier encyclopaedia has addressed the shortcomings of the 1996 version, added new features and continued to improve the style and feel of the interface. In some areas, Grolier now claims to exceed the features list of Encarta. For example, Grolier contains close to 35,000 articles which is slightly more than the 1996 version (32,000) and 17 percent more than the number of articles in Encarta. Grolier has substantially improved its Internet links with more than 20,000 Internet sites dynamically linked to about 14,000 of its articles, more than four times the linkages embedded in Encarta.

In contrast to the 1996 Grolier encyclopaedia, the 1997 version has made some fundamental improvements. This latest edition contains more than 1,200 maps (compared with 800 in the '96 version), 15 hours of sound (compared with several hours in the previous version), fixed some of the major shortcomings of the 1996 user interface and replaced the Yearbook and Pathfinder features with Guided Tours and Interactivities. The single biggest drawback with the 1996 version was the inability of the product to adapt to any screen size, regardless of the user's screen resolution

settings. For users with a screen resolution of 800 x 600 for example, the full Grolier screen appeared in a reduced window in the centre of the monitor. This made other elements of the product difficult to see. Thankfully the 1997 version will open to full screen size regardless of user settings. One innovative addition in the area of user interface preferences is a choice between four totally different desk top environments, each of which alter the look of menu buttons, on-screen colours and fonts. This is not unlike the desktop options that come with, for example, Window 95 Plus.

A signature feature of the CD and hard copy versions of the Grolier encyclopaedia is the detailed yet simple style of writing. Grolier is ideal for children and teenagers looking for a less conservative or scholastic writing style without having to compromise on content quality or coverage. A large percentage of the

encyclopaedia's graphics continue to be unique in that they are coloured illustrations as opposed to photographs. In many ways these illustrations are preferable to photographs because the detail is clear and given the vast array of user standards in hardware, the illustrations often produce a better result when printed, than a photograph.

Like most computer based reference products, Grolier comes with an impressive array of search features which demonstrate the extensive cross linking of text, video, illustrations, sound and animation. The addition of thousands of external linkages embedded in articles and accessed via the Internet, makes Grolier one of the most extensive "virtual" encyclopaedias on the market. Unfortunately, the one year free

Internet service offer, advertised on the product packaging that I received, applies only to customers in the USA. The text of articles and most graphics can be cut, pasted and printed with ease. The encyclopaedia also links directly into your word processing package for instant transfer of words or pictures.

Grolier has continued with the development of an embedded atlas which provides more geographic information than other competing encyclopaedias, but is nonetheless basic by comparison to dedicated

computer atlases. Users will need to decide whether the convenience of having the atlas integrated into the encyclopaedia outweighs the inevitable content restrictions. Simple fact boxes are available for each continent and country, and they incorporate a picture of the national flag, a sound clip of the national anthem complete with words and a list of basic geographic and demographic statistics.

The encyclopaedia has a timeline feature which is relatively unchanged from the 1996 version. The timelines are easier to read now that the active window can be enlarged to full screen size. Each timeline is divided into ten historical periods. Each period contains hotspots that link back to articles, maps and photographs. Alternatively, history can be displayed in a window which uses a chronological scale with associated articles listed by year. The table allows a user to type in a date from 70 million years ago to the present. The program then links to articles or other information relevant to the selected date or period.

Replacing the Yearbook and the section on Pathmakers, the 1997 version has Guided Tours and Interactivities. It is evident that

Grolier is experimenting to some extent with these latter features, looking for innovative ways to differentiate their product. In our view Grolier needs to improve on the Guided Tour concept (collections of articles, pictures, maps and sounds based around a subject such as romanticism or weapons of combat) by making them more "guided". As they currently stand, the guided tours would be better described as information summary areas based on several thematic groupings. It would much more helpful if the Guided Tours were to give at least an outline or structure to follow in relation to researching each of the 16 "Tours" included on the CD.

On the other hand, the Interactivities show considerable promise. In total there are seven Interactivities which, in a similar fashion to the Guided Tours, pull together networks of articles, pictures and animations around a particular theme. My particular favourite is an interactivity on human anatomy dealing with the bones of the skull. On-screen buttons allow the user to disassemble the skull, assemble it again, rotate it through two axes or turn on labels that name the various bones in the skull. Other animations in the Interactivities section strip away layers to reveal detail inside machines

or buildings, reminiscent of the Dorling Kindersley series of CD-ROM products.

Summary

The battle for supremacy in the CD encyclopaedia market has been intense for the last three years. Until the 1997 Grolier encyclopaedia appeared, Microsoft's product *Encarta* firmly held first place. Grolier has now closed that gap to the point where only personal preferences of a stylistic nature can separate the two products. Based on our assessment, there are no compelling technical differences to clearly differentiate between the two encyclopaedias. The Grolier encyclopaedia gives me a comfortable "book" feel whereas the Microsoft product is more "high tech" in character. Based on Grolier's extensive experience in the development of a hard copy encyclopaedia, it seems to be qualitatively edging past the Microsoft product, although such comparisons are notoriously difficult to make. Microsoft still holds the lead in applying multimedia and product engineering expertise to its product. Given the comparative advantages of both companies, it is hardly surprising that the individual product strengths are so diverse.

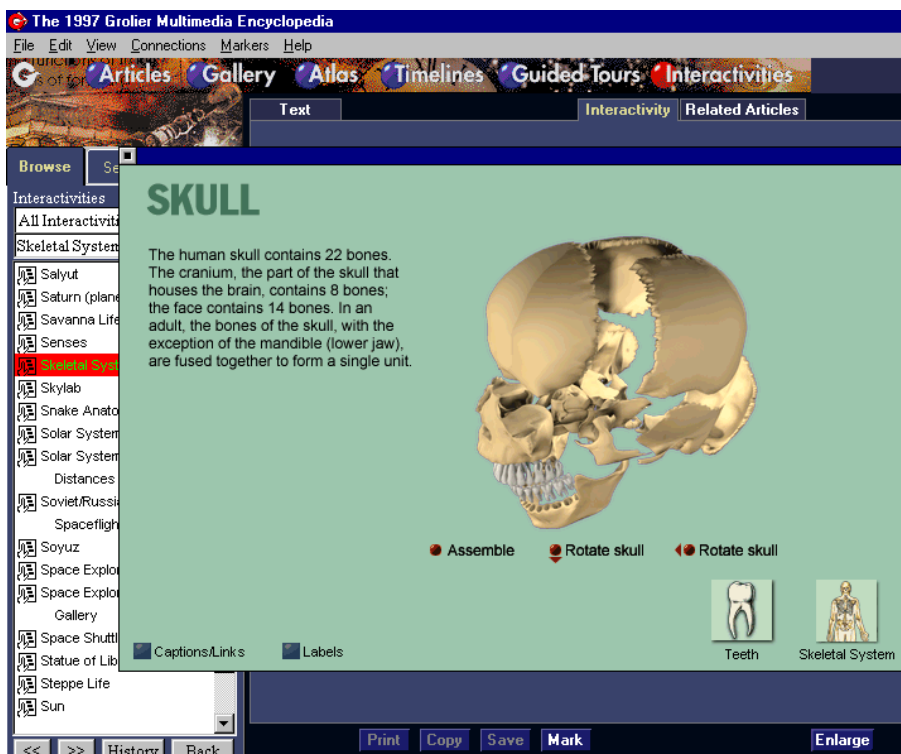

Rating (out of 10) 8.0

Gloria's Gaddings

by Gloria Robbins

Last November I wrote about the computing side of an AESOP project in the Pacific. Let me now tell you about some of the happenings on my various projects away from working hours.

My first project was in Fiji, working for a tourist company. While with them I visited villages, danced with a village chief and had great difficulty trying to sit cross-legged while listening to speeches and drinking kava and having to crawl on my knees to pass in front of the chief. The company gave me a week's holiday travelling around Fiji at the end of my stay and during this time I managed to fall off a rock during a river crossing, dragging the Indian taxidriver who had been detailed to look after me into the river too. He was not amused as he had his business attire (white shirt, dark trousers and leather shoes) on and we were both wedged temporarily bottom down among the rocks.

My next project was on a small volcanic island, Kolombangara, in the Solomon Islands. All transport was by motorised canoe if there was enough petrol onboard and the engine worked. One moonlit evening when I was returning from a day visiting remote villages we ran out of petrol in one of the lagoons and the boatman and his daughter had to paddle to two villages before they found a relative willing to give us some petrol. We had picked up a very heavy, smelly dead turtle on the way which the boatman had laid against my feet planning to sell the shell once he was home again. I have a lot to learn about embarking and disembarking on and from canoes in the surf or with a makeshift wharf a distance above where the canoe is gently or not so gently rocking with the waves. I was waved away from Kolombangara at 5.30am in total darkness in pouring rain clutching my laptop in a garbage bag to make the two hour trip to another island with an airstrip from which I would fly back to the capital, Honiara.

Returning to Honiara on another project this year, I was accommodated in a unit with a magnificent seaward view. To arrive at work I had a choice of 173 steep, generally wet steps with a mud slide at the bottom, or a two and a half kilometre walk around by road. If it was raining heavily I could phone up and

someone from the dispensary where I was working would drive up and collect me. If they were very busy they would suggest I stayed home and worked on my laptop. At weekends either I or another volunteer sometimes had transport which meant we could go further afield than the Honiara Botanic Gardens. One such place was a small island called Voululua. To arrive there we drove for just under two hours, waited for about an hour while a village man tried to attract attention from someone on the island by flashing signals with a small mirror. Eventually a canoe arrived and we embarked for the thirty minute trip to the island. Once there we could swim and snorkel, relax on the beach and partake of a traditional meal.

My last project in Kimbe, West New Britain has a very different setting. I was accommodated in the company's guest house where a house boy makes the bed, does the laundry, prepares sandwiches for lunch and serves dinner at night. Partway down the hill is a club for senior staff with its own swimming pool and an excellent library. At the bottom of the hill is the well manicured company golf course which also provides a safe area for walking before or after work among tall shady trees which the golfers must curse at times. Friday nights are 'nosh' nights where all members of the club share a meal prepared by each department in turn. As expatriates from other local companies are often also club members it was an opportunity to make new friends outside the company. The company owns some cabins on a beach not far from Kimbe and I attended a Father's Day barbeque there...I was also invited to a christening service conducted by the

bishop for New Britain who was one of the first to doff his robes and support his twoyear old daughter in the club swimming pool at the end of the service.

While I have written about some of the 'outside work' happenings on my travels, I have found that most evenings are passed working on the laptop and that there is a considerable time when I am left to my own devices. I read in that time and am teaching myself to play bridge through a computer game. I would always like to know the local people with whom I work better, but it is not common practice to invite expatriates to their homes. Each project provides a different style of accommodation. I have been in a local house which, when I moved in, crawled with cockroaches and have described the luxury of a guest house. An ability to accept new situations for both work and leisure seems to be an essential qualification for a volunteer.

CD-ROM

By Nick Thomson

Welcome to the first issue for 1997. This issue features reviews of *Encarta 97*, *Mission to Planet X* and *Corel All Movie Guide 2*. I trust that you have all had an excellent festive season, and that the year has got off to a good start.

Corel All Movie Guide 2

Corel's All-Movie Guide has now been updated so that it provides information on more than 100,000 movies, documentaries, made-for-television films and videos. It also includes an extensive database of information on actors, directors and other people in the industry. It claims to be the world's largest movie database, and users can now update the information monthly over the Internet, free of charge.

When you start the program you are taken to a 3-D Video store, as illustrated in Diagram 1.

From here one can search for movies/videos under 16 categories, such as Recent, War, Documentaries and Children, or access five special features:

- Browse Movies with Photos;
- Browse People with Photos;
- Browse All Movies;
- Play Games;
- Browse Famous People.

The Browse categories are useful for those who wish to delve into the background of the film & video industry. The interface is much improved, with a layout of drop down menus, photos and toolbars that are easy on the eye and easy to use. One can move around and between the various categories fairly easily.

The feature most users will be interested in is the index of films and videos. A sample screen is illustrated in the image at right. One can search by all movies or by any one of the 16 categories, and the item once

located is well presented. There is category information such as country, plot and story author, a paragraph or two of summary information about the movie, and lists of cast, credits and (where appropriate) awards. While there are a number of movie stills and posters (which can be enlarged to take up most of the screen), there are no video or audio clips - a disappointing omission. The quality of most of the photographs is good. Unlike the first version of this product, it is now possible to search under the category of Movies with Photos. One very useful addition to this update is a 'right click' summary feature, whereby you can click with the right mouse button on people listed in Cast or Credits and obtain a summary of the life and career of that person.

For those who take their movie watching fairly seriously, it is possible to classify individual movies according to personal preferences, save these in a personal profile and then allow the program to use them as a basis for 'Suggestions' on what might be viewed at some future time. It is also possible to set a fairly complex set of filters on a search so as to narrow down the type of movie you are interested in. One can add annotations to any of the movie screens, or print out lists of movies to rent or buy. There

Diagram 1

is also a Timeline and two types of game - Trivia and Crossword Puzzle. One can set categories for both of the games - the Crossword Puzzle is quite entertaining, although you do need to be something of a movie buff to be able to solve the clues. The puzzle re-generates each time you play the game, and if you start to lose patience you can click Solve to fill in all the missing clues.

One can search for movies by keyword, plot, country or mood - so it is not too difficult to locate just about any movie

imaginable - in fact I was able to track down an excellent South African wildlife video called *Animals Are Beautiful People* which I've been after for about 10 years. (It is directed by Jamie Uys, the man who created *The Gods Must Be Crazy*).

A 16 page user guide is included - it provides a good outline of all of the program features, and good, context sensitive online help available within the various components of the program. As mentioned above, one can download updates from the Internet - like all downloading processes it is slow, but works satisfactorily. To access this feature go to the Corel home page <http://www.corel.com> and click on the *Free, Fun & Fantastic* link.

Encarta 97

Encarta 97 is the latest version of a multimedia encyclopaedia that has been around for a couple of years, and is particularly strong in terms of its use of multimedia and a variety of approaches to the retrieval of information, including the use of the Internet. It led the way in being the first multimedia encyclopedia to provide updates via the Internet; this update has broken new ground in that it has added Web Links, a feature that provides links to over 2,000 educational sites on the Internet.

The main encyclopedia screen interface has changed little from the 96 update, and it is illustrated in Diagram 2. The screen layout works well, and the screens are clear, colourful and easy to follow.

The article content is at upper primary/secondary level, and for the statistically minded, there are over 28,000 articles, over 300,000 cross references, and an integrated dictionary with over 140,000 references. The coverage is certainly adequate for this level, but not for in-depth study or tertiary projects.

The main search mechanism is still Pinpointer, and this works well. One can search for an article title, do word searches with or without operators such as 'and' and 'or', search by category (subject areas such

Diagram 2

as geography and history), media type, time or place. In addition, there is a Find Wizard that takes you step by step through the various search options listed above. This is easy to follow and works very satisfactorily.

The menu bar has been tidied up, and there is now a features menu, which covers media features, online features and tools. Media features includes a media gallery; 'InterActivities' (a collection of interactive learning activities on topics such as orbit, famous paintings and fractals); an extensive collection of guided tours on topics such as people, performance and science & technology; the Atlas, the Timeline and Mindmaze. This combination of 'learning tools' means that *Encarta 97* is a great medium for browsing as well as searching for information about particular topics. I thoroughly enjoyed a musical tour of some of the jazz greats.

The Atlas allows one to zoom in to country or regional level maps, as well as providing links to articles about the country and (in some cases) its major features and/or cities. In the case of Southern Africa, for example, one could only zoom in as far as a map of most of the southern part of the continent, and from there to articles about each country. This feature is fairly basic, and dedicated multimedia atlases such as *Encarta 97 World Atlas* are a much better alternative for those who wish to do some serious geographic study.

The Timeline is essentially the same as in *Encarta 96* - a continuous scroll of significant historical events from human origins to the end of 1995 - the latest events being elections in South Africa and the peace process in the Middle East. One can jump to articles about the various events by clicking on the image that they represent. The Mindmaze is a quiz game that requires you to negotiate a castle maze by answering a series of general knowledge questions (you can nominate the subject area). It too is essentially the same as in *Encarta 96*.

One of the highlights of this release is the online features. As with *Encarta 96* it is possible to download updates every month from the Internet, but this edition also provides a directory of over 2000 web links. These are grouped in the same nine areas of interest as used by the main encyclopedia. For each link there is a brief outline of what

it is, plus its URL (web location). You can copy this or (if you have a web browser running) connect directly to it. The only disappointing aspect of this feature is that there are no cross references from the main encyclopedia to the web links - it would be great if you could look up a particular article, and then jump directly from that article to an associated web site. The process of downloading Yearbook updates is fairly straightforward, and there is a Download option that takes you through the process step by step.

Encarta 97 continues to be one of the most flexible of the multimedia encyclopedias when it comes to extracting information. Articles or highlighted selections of articles can be copied or printed, as can images or image captions. One can add notes to articles (called notemarks), and pull up a word processor panel (Write) in order to carry out basic word processing within *Encarta*.

There is no user guide, but there is detailed and well illustrated online help available. For first time users there is an Overview that provides a very useful and well illustrated series of screens on the various features available.

Australian RRP:
Upgrade Price \$59.00 (Communicate members \$49.00)

Format: One Compact Disk (Win 3.1, Windows 95 or Windows NT 3.51)

System Requirements

486DX or higher running Windows 3.1, Windows 95 or Windows NT 3.51, 8 Mb of RAM (12Mb for Windows NT), 13 Mb of Hard disk (20 Mb for Windows 3.1), Double speed CD-ROM and Soundcard, SVGA display, Mouse (Modem and access to Internet required for online Yearbook updates).

Mission to Planet X

Mission to Planet X (Internet Coach for Kids) is a fascinating adventure game that teaches children how to use the Internet. The concept is a quite unique one - in the process of visiting all planets in the Solar System you learn how to use tools such as browsing, FTP, email and web publishing.

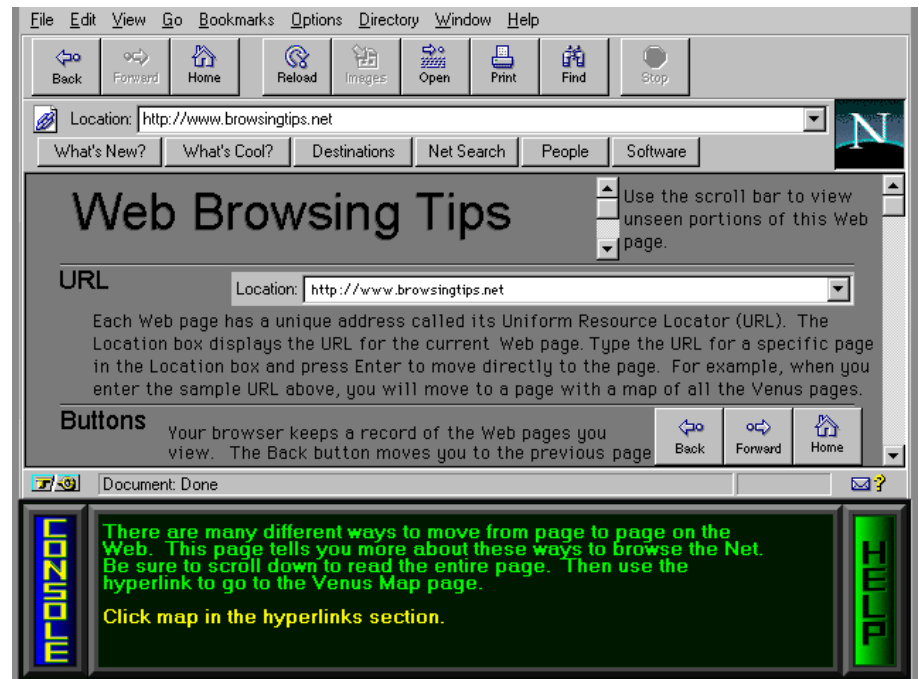

Diagram 3

The object of the game is to save Starsurfer - a man who has escaped from the mean and evil Sunhams (who are of course a threat to Earth, civilisation as we know it and next week's episode of Days of Our Lives). If Earth is to be saved you have to rescue him, and to do this you must find an object on each of the nine planets of Earth's solar system.

Users travel from planet to planet within the Solar System - selecting a planet by 'warping' to it and then commencing a mission by initiating the browser. At each planet, users are taught skills related to a particular aspect of the Internet. These are as follows:

- Earth - general overview of the game;
- Venus - using an Internet browser;
- Mars - Using email;
- Mercury - Searching the Internet;
- Jupiter - Chatline;
- Saturn - Multimedia tools;
- Uranus - FTP (File Transfer Protocol);
- Neptune - News services on the Internet;
- Pluto - Publishing your own web page.

As illustrated in Diagram 3, when you start your mission on Venus the top half of the screen is an exact reproduction of the Netscape browser, and you are required to use tools such as Bookmarks to locate the information you need on this planet. One has the feel of actually being on the Internet, although in fact the whole game is played in simulation, and it is not necessary for users to be logged on while they are playing, or for them to have their own copy of Netscape.

The game is entertaining, and it makes use of a good mixture of full motion video and sound effects to keep the realism high. When you are carrying out tasks such as searching for sites on the Internet, you have the feeling that you are actually on the Internet. The skills in each of the above areas are well taught, and there is online Help when you need it. It is an excellent and entertaining way to learn how to use what is rapidly becoming one of the most potent

tools for electronic communication and information sharing of our time.

Once you have used your newly learned Internet skills to locate the various objects you need on each planet, you proceed to Planet X (a 'newly discovered planet' in our Solar System) where there are 28 rooms of "mystery, danger and Sunham trickery" to be negotiated. Once again it requires Internet skills to outwit the baddies and rescue Starsurfer. There is a 5 page User Guide that provides a brief outline of the various game features, and online help available at various points.

Australian Distributor: Internesto

Tel (09) 388 2615

Fax: (09) 388 2614

Email: seek@internetso.com.au

RRP: \$US38.95

Format: One Hybrid Compact Disk (Windows 3.1/Windows 95/Windows NT and Macintosh)

System Requirements

Windows: 486 DX66 or higher running Windows 3.1, Windows 95 or Windows NT, 12 Mb of RAM (16 Mb recommended), Windows compatible soundcard, quad speed CD-ROM, SVGA display, Mouse.

From the net...

World War III. Australia has succeeded in building a fantastic computer that is able to solve any strategical or tactical problem. The military leaders are assembled in front of the new machine. They describe the situation to the computer and then ask it, 'Shall we attack? Shall we retreat?'

The computer computes for an hour and then comes up with the answer, 'Yes!'

The generals rather stupefied, look at each other. Finally one of them asks the computer, 'Yes, what?'

After another 15 minutes the computer replies, 'Yes, sir!'

Take Control

John Saxon explores the joys of computing

Do you sometimes feel that these PCs we play with are getting away from us? That operating systems are now so complex that we have no idea what the machine is really doing most of the time? That perhaps a little artificial intelligence is creeping in, and they are beginning to develop some of the characteristics of awareness?! Sometimes (particularly with WIN95) I begin to wonder...

These thoughts often seem particularly appropriate after installing new (or updating) driver software in WIN95. Sometimes things happen which are really unexpected or which do not appear to have logical explanations - the following two examples may illustrate this:

Video Driver:

WIN95 had not officially hit the streets when I bought my current system - at least the current case, monitor, and video card. So the ATI Winturbo 64 (with 2 Mb DRAM) only came with DOS and W3.1x drivers. But WIN95 included some generic ATI drivers so I had no problems when I installed WIN95 for the first time. But the other day I thought I would check out <http://www.atitech.ca> and see if they had some new flashy WIN95 drivers to download - sure enough they did and I duly installed them. I should add at this point that my 15" MGC monitor is not listed in WIN95's list of supported monitors (it's probably a rebadged monitor). So I had told WIN95 to configure for a standard VGA 640 X 480 monitor, but this limited my display options.

However, after installing the video card driver software, a slight problem developed. Talk about Catch-22! Somehow the picture size was now larger than the screen size - the new ATI drivers had an option to allow "hot keys" to be set up to allow the user to move the larger picture around within the viewable screen - but the screens to configure the display characteristics and the hot keys were all larger than the actual

screen - but guess where the "apply" and/or "OK" buttons were placed. You got it - off the bottom of the screen! So no amount of changing parameters was any use as I couldn't apply them!

After going backwards and forwards fuming about this for 30 minutes or so, I eventually slept on it, and by the next morning I had remembered the way out for this type of looping around problem. WIN95 has a "safe" mode of operation (reached by pressing F8 after the starting Windows 95.... message during the boot sequence). In "safe" mode, only a very basic set of drivers are loaded, and in this case I was able to pick another monitor type, which then brought the "OK" and "apply" buttons into view, and I was able to sort things out. But for a while I began to wonder if the computer was out to get me...

Modem Driver:

Keep reading - this one is "a wee-ripper" as Billy Connolly would say.

After recently re-installing WIN95, I had not bothered to re-install Maestro's latest drivers, but just accepted the WIN95 ones. However Dave Sutton's message in tip.help about reliable connections persuaded me that I should install them. Dave maintained that you get dropouts after about 5 minutes without these drivers. I had not been getting dropouts at all (perhaps it is because I use a

14.4 Kbs modem), but installing the new drivers sounded like a good idea anyhow.

So I downloaded the drivers from the Maestro page at <http://www.maestro.com.au/ftplist.htm> and installed them per instructions and everything seemed fine. All my Internet applications (Email, Netscape, Agent, ftp, mIRC, etc.) all appeared to work OK. There was only one strange thing, and that was that I could no longer hear the modem connect sounds (despite turning up the WIN95 modem preferences volume control to maximum, etc.). No sound from an internal modem is rather annoying but not catastrophic, because I find that the sound is quite a valuable aid to knowing what is happening when logging on. When I brought my modem, the external model was almost \$100 more than the internal - so I learned to live with the drawbacks of the internal devices (this sentence to avoid tech-Ed's lectures about the benefits of external models!).

But a day or so later, I wanted to reply to an email message that had a dozen or so cc: addressees, and I also cut and pasted some text into my reply, but a strange thing happened. While transmitting the message, Eudora flashed the addressees on the screen, but when the transmission got to the text part it hung. During various attempts to send the message I got error messages such as "Error reading from network. Cause: socket not connected (10057)", and "Error getting network address for "pcug.org.au". Cause: non-authoritative host not found (11002)", or "Could not connect to "pcug.org.au" Cause: Connection cancelled (10004)". These were all when I was on-line with all other software apparently working normally. No doubt those error messages speak volumes to the initiated but they didn't do much for me. It seemed like nothing I could do would cause that message to be sent.

Initially I thought all the cc: addressees might be causing the problem - deleted those - same problem. Then I thought perhaps it was the cut and pasting - deleted that - same problem.

So to the old standby - send yourself a short test message. Did that and it worked perfectly! Tried a short message to a friend - worked perfectly!! After much testing I found that it was only when the messages got longer than the short test that the transmission failed. I never did find the exact number of lines, words, characters or

whatever that caused the transmission to fail, but it appeared to be OK with a couple of lines, but no good with 6 lines or so,

I completely reloaded Eudora (Ver 3.0) and still had the same problem. By this time I had some longish messages prepared that I really wanted to send, so on suggestions from some friends I tried Agent, and then Netscape. Both of these also had problems with the longer messages and still the mail did not get through. Agent just appeared to hang midway through transmission, but Netscape was more informative - it's message was "message sent - waiting for response" followed bynothing. Eventually when quitting the mail section of Netscape an error message of "message not sent..." appeared - another bit of forked tongue software.

So finally after having struggled for several days, the penny dropped. If all my email programs had problems, then the fault must lie in the common software - the WIN95 operating system. What had changed? Of course - the Modem drivers. More investigation in that area revealed that one part of WIN95 thought it was using the generic Maestro driver, and another was using part or all of the new Maestro driver. Some removals and re-installation got it all pulling together with the new driver, and much to my amazement, all the email software then transmitted flawlessly!

So what was the mechanism for the failure? Short answer - I have absolutely no idea. Something to do with block lengths, TCP/IP protocols, or sheer bloody mindedness! I should reiterate that all other Internet apps appeared to be working perfectly throughout.

I guess the moral that emerges from all of this is to maintain copious notes in minute detail of everything one does to any system. One day I'll get around to that, but I think it may take a bit of fun out of fixing these (mostly self inflicted) problems. Actually despite the impression I may be causing - I do get a lot of useful work and fun out of my hobby! Of course, I would mend my "lack of copious notes" ways if I did this type of computer work for a living.

Oh, and by the way, about 2 days after fixing the email problem - the modem sound returned - possibly something I did, but I don't remember. If it was not, then that's really scary stuff...

VENTURA

by Ted Monaghan

Corel Ventura 7

Who would buy a publishing program? Obviously, someone who produces books or magazines for a living. Going by gossip, such programs have a reputation for being huge, complex, flawed and expensive. So who, except for publishing houses, would be bothered with them? This brings us to an even more off-putting observation: a desktop publishing fad is blamed for those garish, kitsch, rubbishy newsletters put out by try-hard amateurs.

Not surprisingly, many wise people have concluded that DTP is best left to the professionals (to get good results) and the pretentious (to make fools of themselves). After all, the reasoning goes, any special effects you really need are achievable with a powerful word processor such as MS Word or WordPerfect. True, if you set your mind to it, you don't need a DTP package to make a page scream at a reader. A dozen different typefaces, a few bold or italicised or underlined bits and the odd graphic adornment or two will mask a paucity of the content, even if they are the mischief of a mere word processor.

This brings us to the nub of the issue: the content. What do you want to communicate? To whom? Is it sufficiently important to you for you to go to some extra effort to make it readable even for a distracted reader? Does it have a shape? Are you handling complex arguments or subtle material? Do you want the reader to use it as a reference or to be able to regain his/her bearings after flicking back through the last

few pages? This is where DTP, properly used, comes into its own.

Unfortunately, many of the writers who could most benefit from using DTP in this way have been formed in different traditions, those of the thesis and the learned journal. There, the content must conform to styles which force it to stand on its own

“The task is to get the material read and understood.”

merits when considered by a discerning reader. Very good. But to use demanding material in a submission to a board of directors, or in a manual for staff training, might prove unpersuasive if it is presented in double-spaced 10 pont Courier.

The task is to get the material read and understood. The length of the document and its order of difficulty (complexity) are generally cited as the biggest hurdles and often the writer dilutes his/her material, sometimes to the extent that she/he produces a patronising paraphrase. This does no justice to the author, his/her ideas or the readers.

A little extra effort put into editing for DTP and the generation of a good glossary might produce a result which is simultaneously more demanding and more readable for non-experts. And if the job can be done by a synopsis, even that will pack more punch if it is published. No, I am not saying the medium is the message, but I am

convinced that the message will be understood more accurately and more willingly if the medium is used skilfully.

Well, can't that result be achieved with a word processor alone? In practice, the answer is “no”, because the conventions are somewhat different and, although it may be technically feasible, it requires a lot of knowledge about typesetting and typography to set up a word processor to do things that a good publishing package does automatically.

Conventions and Amateur Opinion

Typesetting conventions have evolved over hundreds of years. It is an expert craft and its discipline ensures that form follows function (unlike the efforts of the DTP faddists). A good professionally produced book or newspaper or magazine is easy to read and to keep reading. After a few thousand words of word processor output, however, most people find tiredness setting in. The same applies to any laser output with a resolution lower than 400 dpi, regardless of the source. Properly typeset documents are able to demand more stamina of a reader.

Let me illustrate. Assume that what you are writing might be read on the bus, or over the course of a few nights just before bedtime, or that the reader is a reluctant, unskilled reader. How can you present it in such a way that the message is grasped despite broken concentration, compromised lighting and all the other static? A lot of writers tackle this seriously. First, they go for bigger print - it's easier to see. Then they

look at fonts, and a sans serif like Arial looks extra clean - it must be easier to read! Last, if they are bent on going the whole hog, they might add an extra half-space between lines, just to make it clearer. And what they end up with, after applying so much uninformed commonsense, might look very good to them but be nearly unreadable for precisely the people they want to cater for. It will certainly be less readable than a tight standard column of 8 point Times Roman on smudgy newsprint. Why? Because publishing is geared to the way people read.

Check it out. What is the target readership of *Picture* magazine? Are they all skilled readers? Do you really need to use big print if *Picture* doesn't? There you will find stuff set in 4points in the advertising. Do you have to stick rigidly with 'familiar' language? *Picture* magazine uses a couple of dozen words of its own for human genitalia, and somehow the readers suss out the meaning. This is an argument of reductio ad absurdum, but the point is that writers might often avoid talking down to their readers by taking care to present material well.

DTP helps with all the technical considerations. In Corel Ventura, at least, the default settings produce good readable text by observing typesetting conventions. My grasp of these conventions is superficial, so I rarely fiddle with the Ventura defaults. There are still aesthetic judgments to be made about page layout, density, etc, and to help at that level the program offers a large number of excellent samples that can be used as templates. A newcomer to DTP, eager to use every bit of power at his/her fingertips may be overwhelmed by the simplicity of the samples, but this is serious publishing where less is more in most situations.

Are you Convinced?

This preamble is to explain why *Sixteen Bits* would carry a review of software which is often seen as for a tiny niche market. I am convinced that DTP could be of interest to anyone who is concerned with the final reception their document receives, as an alternative to having their work professionally edited and typeset.

There are a number of DTP products on the market - PageMaker, MS Publisher and

QuarkExpress are names I have heard, though I have never seen or used any of them. In over ten years I have not needed more power or flexibility than Ventura has offered, and as my interest is in producing documents rather than in computers and software, I have never been tempted to try something new.

Opening the Box

The Corel Ventura 7 box contains two CDs, a user manual and a clipart manual. The CDs are jam-packed with

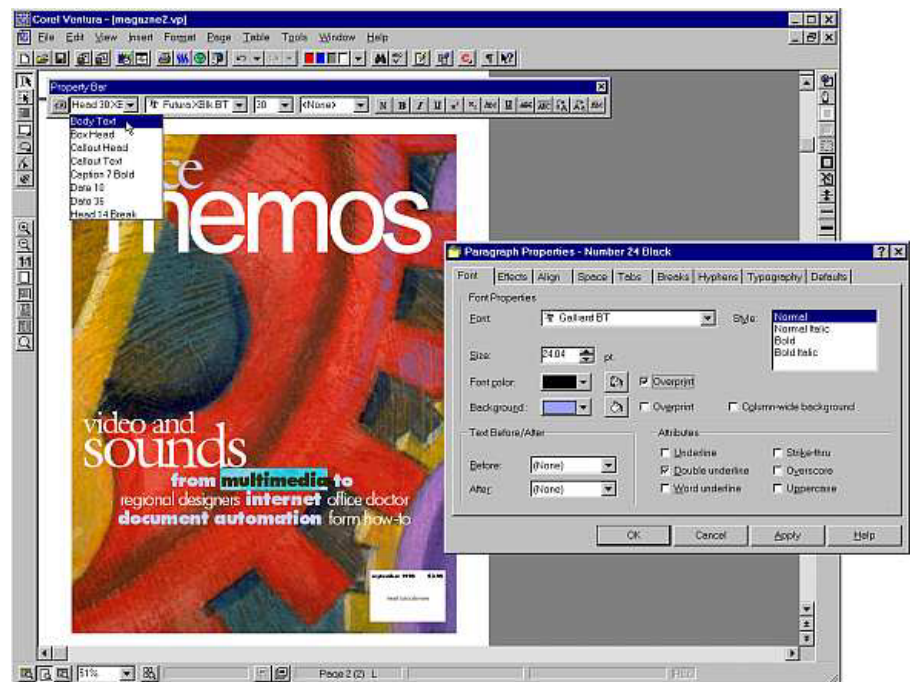

- Corel Ventura 7
- Corel Database Publisher
- Corel CD Creator 2
- CorelMemo
- Corel Photo-Paint 6
- Corel Script Editor
- Corel Versions
- Corel Capture
- Corel WordPerfect 7
- Envoy
- Type 1 and TrueType fonts
- Clipart
- Samples
- HTML example files
- Hyphenation Developer's Kit
- Add-on Developer's Kit

It is a very full package. There is a little more to spend if you want to output Acrobat (*.pdf) files, but otherwise it is a complete, state-of-the art package for paper and electronic publishing.

The User Manual

Corel Corporation should be congratulated on the User Manual. It is designed for beginners, and includes step-by-step tutorials. Years of experience have not taken me beyond the beginner stage in many aspects of publishing. To extend my competence, say, into preparing colour for commercial printing, this manual is where I would start. It offers just enough theoretical and practical guidance to allow me to keep control of the process in liaison with the experts at a printing factory. It describes, for example, a range of technical difficulties that can be posed by different types of material. The manual does not duplicate the on-line help, but interacts with it.

The User Manual is less than 400 very readable pages, and stands as an excellent example of what can be achieved when an author thinks carefully about his/her target readership and the use to which the document will be put. After some introductory stuff, the manual offers three tutorials:

- 1 Getting to Know Corel Ventura - an introduction to the work environment and its document management features
- 2 Designing a Newsletter - which covers many of the basic skills to produce an effective paper publication
- 3 Creating an HTML Document - which leads the user step-by-step through the process of setting up a visually attractive, high-quality home page

The next part of the manual deals with the fundamentals of desktop publishing. After discussions of page design, typesetting, typography and fonts, it takes the reader on to the Corel Ventura's methods for the generation of tables, illustrations and document-wide features (table of contents, indexes, etc). Then there are invaluable pointers on commercial printing, service bureaus, document management in a workgroup setting (where team effort is enhanced by the Ventura Navigator, Ventura's Library feature and Corel Versions) and database publishing. The final chapters are devoted to electronic publishing - portable document files, SGML and HTML publishing, hypertext, including hypermedia and multimedia elements in documents, publishing to CD-ROM and publishing to the Web.

If approached with an open mind, a user with a word-processing background should pick up the essentials very easily by working through the manual. The key, I suspect, is to not mistake Corel Ventura for a turbo-charged word processor. Word processing evolved from the typewriter tradition, and gives priority to the needs typists and offices, while DTP assumptions and conventions reach back to foundries, hot metal and printing presses which could use massive force to achieve readable and aesthetic results for the reader. Word processors and DTP programs do resemble each other on a computer screen, but there remain fundamental differences. Nevertheless, when this is grasped, the program is both powerful and easy to use. With Corel Ventura, dazzling effects can be produced intuitively.

Installation

The Editor suggested I make notes during the installation, as I would forget any problems I met by the time I wrote the review. I sat with my pen poised, but wrote nothing. Very smooth; and unlike earlier Corel products I have installed, it did not take the law into its own hands when installing fonts - I was invited to choose, and the installation program did as I asked. The only surprises I got were (1) the size of

the thing - depending on what elements you choose to install, it can stake out a disk space claim of over 200 Mb and (2) the screens that came up announcing the installation of Corel Office 7 - in fact it was WordPerfect 7, with a single .dll file in the Quatro Pro directory.

Firing it up

The old versions of Ventura that I had used had two petty annoyances that persisted from version to version.

The first of these was that the program loaded the last-used style sheet when it opened. The hazard was that I sometimes changed settings before I remembered to bring in a fresh style sheet, and this could wreck any documents that used the style sheet.

The second annoyance was that fonts were listed in the order in which they had been installed on the machine rather than alphabetically.

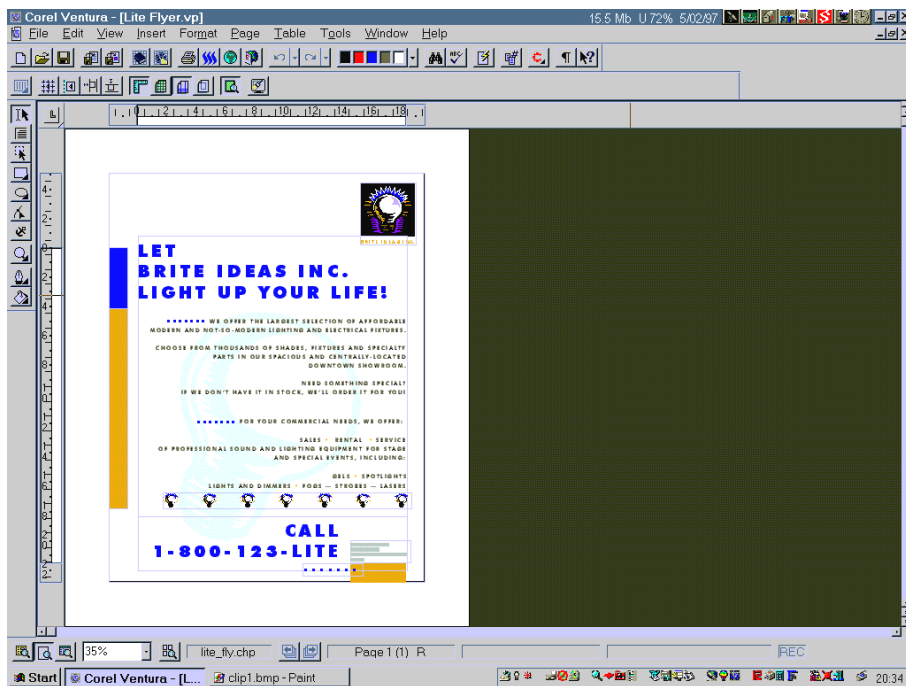

Patches were available to fix these, but I couldn't help wondering why any manufacturer would fail to rectify such silly little glitches, year after year. Here was where I could lose confidence, regardless of how many slick new features the package had. But my worry proved groundless - a default 'master page' appeared on opening and the font list was alphabetic. I then got on with exploring the new-look program.

What it was always good at

Corel Ventura dialogs give the user nearly total control over the finished product, and allows for simple standardisation to a house style or a style designed for a particular document. From the outset, this has been done by inserting a text document (generated by almost any word processor) and then formatting it by the use of 'tools' to modify paragraphs and text. Paragraph properties were defined and attached to paragraphs by tags, so every paragraph with a particular tag was uniform. As items such as various levels of heading, block quotes, footnotes and captions were paragraphs, it was a very simple matter to give a document a uniform look and feel.

The tools were always very powerful, even in version 1.0. Pair kerning, for example, could be modified from one tag to the next, if required, as typography could be defined on a document-wide level, or

within a particular tag. Individual letters could be moved or otherwise modified by the text tool. Spacing and line spacing could be easily modified. Probably too easily, because the defaults were based on convention.

The next powerful feature of Ventura that appealed to me was its ability to organise chapters into whole publications (of almost unlimited size) and automatically keep track of all the numbering changes involved. This ability was invaluable for maintaining handbooks that had to go through regular revisions.

Improvements and the new things it can do

Corel Ventura 7 has lost none of its power to deal with conventional text. But it has changed its appearance and it is now easier to use and capable of doing much more with the formatted text.

New User Interface

As a 32-bit Windows 95 application, it now sports multi-document windowing. Also, the old style of working with various tools (each of which had its own cursor) has been modified. Corel Ventura's new cursor is modeless: it senses what the user is doing, changes tools automatically and flashes the appropriate property bar onto the screen.

Two other very noticeable new features are that the Undo/Redo feature can now be set for up to 99 levels, and there are very useful non-printing grids to help keep control of page layout. This last feature is invaluable when fiddling to see how things will fit during the early drafting process.

New Document Design Features

Style sheets remain a key feature of Ventura, but they can now be managed through a document's 'master page', which is akin to the template concept in word processing. As one would expect of Corel Ventura, this increases the user's control and the power available.

In the past, the character tags in a style sheet assumed that all features of a paragraph could be defined on a paragraph-wide basis. It was possible to highlight and modify text within any paragraph (as in a word processor), but this was a bit inelegant and, in my experience, it could be unsafe, because the changes could be lost or corrupted unexpectedly, particularly when set in tables. Now, to enhance Ventura's text handling ability (and stability), text tags, similar to paragraph tags, have been added. And although I had never missed them, now that they are there, I would not like to be without them.

Further new text handling tools include improvements to the tables feature, which now incorporated more greater spreadsheet ability, and an artistic text tool, which allows text to be node-edited, stretched or fitted to a path by the user. In the past, most artistic text modifications were best made in a powerful graphics program for import to the publisher. With the artistic text tool are other new drawing tools, including polygon, Bezier curve and callout tools. And to keep everything sitting in place, Corel Ventura now offers a wider range of frame anchoring options.

New Document Management Features

Putting a long document together is a huge task. It is particularly troublesome if there is a team working on it. Even the most alert editor runs the risk of using a draft version of a chapter or leaving something out. To handle the practical difficulties, Corel Ventura 7 offers a number of new applications. Their functions are fairly evident from their names. I can't offer a helpful opinion on them, as I have not generated a multi-chapter book during the time I have spent with the new Ventura, but the ideas are great. In particular, it is useful to be able to put several versions of a file side by side and have alterations, deletions and additions highlighted in different colours. Anyone who has had to untangle an editing mess (viz, nearly everyone who has undertaken a serious editing task), will see the merit of the idea.

The new document management features are

- Ventura Navigator
- Ventura Library
- Corel Versions
- Multi-user access control
- Revision management

New Electronic Publishing Features

Under File, there is Publish As..., and it includes the options

- HTML
- Novell Envoy
- Adobe Acrobat
- Corel Barista

Corel Barista is interesting. (It is also available for WordPerfect 7). What it offers, over and above HTML, is richer formatting

options, multi column WYSIWYG documents, complex graphics, scrollable text, an extensive range of fonts and TrueDoc technology (which makes all used fonts portable with the document). Barista is Corel's Java engine, so with it such things as popup windows, scrollable text boxes and dynamic environments are possible.

Features Not Reviewed

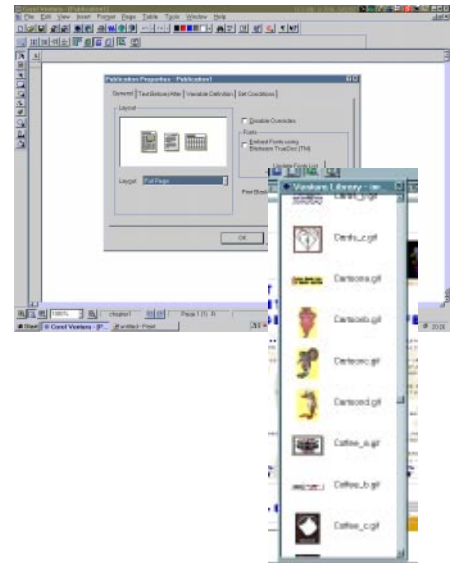

Corel Ventura 7 is much more muscular in the graphics area than previous versions: that much is clear from the interface and manual. My publishing, however, has never made a sophisticated use of graphics, so the tests I made allow me to say only that the graphic elements are intuitive and work for

a novice. I cannot comment on their technical merit, though someone in my position draws a lot of confidence from the fact that Ventura now comes from the makers of CorelDraw.

The last important feature which I have not explored is the CD Maker. It strikes me that this would be a boon to many publishers, especially in conjunction with Corel Ventura's powerful multimedia capacity.

My Adventures In Desk Top Publishing

by Ted Monaghan

My first computer, over a decade ago, was the CPM-based Amstrad PCW512. It came with its own word processor called Locoscript, and once I learned to use it I could produce any text document I wanted on its unintelligent 9-pin dot matrix printer. All documents were based on a template that set page specifications, headers and footers, etc, but most other things had to be done manually. The only way to produce a well organised document was to keep notes on how to replicate style features such as subheadings and blocked quotes. But it did most things that I wanted. I even used it to produce an 80 page policy document, all in single spaced 12pt and 15pt type to save on photocopying costs. Scrolling was very slow, so I built this document in several files and then merged them into a single file for automatic pagination and printing.

Now, think back to the mid-1980's. The Amstrad cost about \$1,200. If I had spent \$5,000 on an IBM clone and the word processing software then available, would it have done the job? Yes, but it would be tricky, with a swag of small files and cryptic codes to learn. Still, that looked like the way to go because I would then be able to output formatted text to a laser printer, whereas the Amstrad could only export ASCII files to any printer but its

own. The man who settled the issue was the computer salesman who told me about Ventura Publisher.

Here was a deal: \$3,500 bought an XT clone with 640Kb of memory, a 20Mb hard disk, an Epson dot matrix printer and software to go with it - Ventura, WordStar, a data base, a painting program and some other bits and pieces. Readers who recall the price of things will realise something was drastically wrong - it took me a couple of weeks to discover that software is not usually (or legally) sold as backup disks. By then the salesman had vanished leaving aggrieved creditors in his wake. I also heard that he had done a Ventura deal with one of the local newspapers, who never got the thing to work, but he had left behind him one slightly uneasy but satisfied customer.

I did not know at the time that publishing concepts are very different from word processing concepts. But what I was after was publishing. I fiddled with WordStar, because text files had to be first generated outside of Ventura, but I soon discovered that I needed only one letter in my text file before I could load it into Ventura, forget codes, and do the rest in a What-You-See-Is-What-You-Get environment. (Later I gave up using WordStar even for the first word, because Norton's Editor could do the job without a fuss.)

Ventura grew with my needs, and new technologies and falling prices meant that I could more or less keep up. I remember being impressed when I read that *The Bulletin* was a Ventura production, and reassured that the scale of my needs would not cause it to fall over. Sometime in the early 90's I came across GoScript, an inexpensive PostScript interpreter, so it was then possible to make use of the vast resources of Type 1 fonts, even if the output was often to a bubblejet. Then came Windows 3.1 and Ventura wobbled onto that platform at least as confidently as most other programs.

To this day I have not become really proficient in any word processor. I have used several versions each of MS Word, MS Works and WordPerfect for correspondence and routine reports (indeed, this file is being written in WordPerfect 7 which is included with Ventura 7). When I write something big, or want to have real control over what a document looks like I still use Ventura. For 10 years I have heard people panning it, especially when a new version is released. I started with Ventura 1.0, a Xerox product, and upgraded pretty consistently (though I missed them between 4.2 and 7) as the product changed hands and through the transition from GEM to Windows. It continues to meet my needs.

PCUG Notices

ACT Alive

The PC Users Group will be participating in the 1997 Canberra Festival on Monday 17 March from 10am to 4pm. Volunteers are needed to staff the booth which involves handing out brochures, answering questions, etc. Contact Ken Livingston on (06) 282 2536 if you can help out for a few hours.

This Month's Meeting

Maestro will be demonstrating their newest products and Ian Johnston will give a presentation on the Communications Policy Team and the consultation draft of the PCUG Communications Policy Statement.

Quiz Night

Don't miss the PCUG's third annual quiz night to be held Tuesday 1 April 1997 7.30pm at the Royal Canberra Yacht Club Yarralumla.

Entry fee: \$5 per person.
Hors d'oeuvres and prizes galore.

Be sure to book your table early by calling Ken Livingston on (06) 282 2536.

Stuffed Again

The following members and friends are thanked for assisting with stuffing our journal for mailing.

Bruce Black
Mike Burke
Owen Cook
Bob Deane
Eddie de Bear
Eddie, Raymond & Sharon de Bear
John Ellis
Tony Fitzpatrick
Rufus Garcia
Sally Hammon
John Hodge
Sue & Jim Hume
Russell Hunt
Emil Joseph
Geoff Lau
Allan Mikkelsen
Don Nicol
Peter Roberts
Gloria Robbins
Erwin Schwinghamer
Rod Smith
Merelyn & Michael Southwell-Keely
John Starr
Charlie Syms
Graeme Taylor
Gordon Urquhart
Lou Wallington

We are *always* looking for volunteers to assist us with the 'stuffing' of our journal. We start around 5.30pm (latecomers are welcome) *usually* on the 2nd last Monday of every month and are generally finished by 8.00pm. Refreshments are provided and any of your knotty computer problems can be debated 'at the round table' in congenial company. If you would like to help, please ring Petra Dwyer at the PCUG Centre on 253 4911 and she will fill you in on all the details.

Next Stuffing

5.30pm **Monday 24 March 1997**
at Northpoint Plaza, Belconnen.

SOFTWARE LIBRARY

NEW AND UPDATED WINDOWS PROGRAMS

(An asterisk denotes Windows 95
specificity or compatibility)

ACCOUNTING

MWAP14

Medlin Windows Accounts Payable 1.4 is a fast, easy to use A/P and check writing program for small businesses. It can print reports for any period or combination of periods. Reports can be previewed on screen and saved to a file. An easily-modified standard chart of accounts is included. Invoices are entered, marked for payment and checks written from a single screen. Reg Fee \$38

MWAR11

Medlin Windows Accounts Receivable 1.14 is a fast and easy-to-use A/R, invoicing, and sales summary package for Windows. Features include the ability to reprint any saved statement or invoice, two auto-bill fields, custom statement and invoice printing, support for up to 4600 customers. Other features include support for up to 32760 entries per month, 1600 four digit sales codes, five programmable tax rates. Reg Fee \$38

The files described in this article are on the January 1997 CD-ROM (PsL Vol 5, #1) which is currently on the Bulletin Board: all are ZIP files. Please quote the month or Vol/# when ordering files on disk.

The text files, CD1 through 7, in Area 1 of the Bulletin Board are the monthly CD-ROM file lists. Catalogues as EXE files are available on request from the software librarians (see Member Services).

Reminder

Most CD-ROM programs are Shareware. A reasonable time (generally one month) is allowed for evaluation, but if you continue to use a program beyond this time you should comply with the author's conditions that usually require payment of a registration fee. Bear in mind that this is the only way by which an author receives any reward for his/her efforts. Unless otherwise stated registration fees are in US dollars.

MWBUD11

Medlin Windows Budgeting 1.1 is a budget module for the Medlin Windows General Ledger program. It produces pie/bar/line charts, as well as comparison reports that allow you to compare actual against prior year and budgeted amounts. Reg Fee \$25

MWGL14

Medlin Windows General Ledger 1.41 is a fast, easy to use double entry general ledger program for small businesses. It prints general ledger, transaction listings, income statements and balance sheet reports for any period or combination of periods. Reports can be previewed on screen and saved to a file. An easily-modified standard chart of accounts is included. Reg Fee \$38

MWPR21

Medlin Windows Payroll Writing 2.12 is a payroll writing program for small to medium sized businesses. Features include built-in State and Federal tax tables, up to four user-set deductions (tips, 401K, medical insurance, local taxes, etc.), report printing for any period, support for up to three other income fields, and more. Reg Fee \$38

COMMUNICATIONS

FAX_N513*

FaxMail Network for Windows 5.13 adds faxing capabilities to Win95/NT applications. Features include an auto-print on receive option, background operation, custom cover pages, a fast fax viewer, timed sends, logging of all past and future fax events, and much more. Reg Fee \$55+

FAX_V513

FaxMail for Windows 5.13 adds faxing capabilities to all WIN31 applications. Features include an auto-print on receive option, background operation, custom cover pages, a fast fax viewer, timed sends, logging of all past and future fax events, and much more. Reg Fee \$25+

HTMASC

HTMASC 2.0 converts pages from the World Wide Web to plain text files, removing all HTML tags. It also provides full text handling capabilities with all the standard features like searching for text, using the Clipboard, printing, bookmarks, and an undo facility. Reg Fee \$25

MODMMETR

Modem Speed-meter 2.0 monitors in real time the transaction speed of your modem in Windows. It graphically displays the number of bytes received or transmitted per unit of time. Using this tool you can see exactly how many bytes are transmitted, when and at what speed. Reg Fee \$15

WBF3236A*

WinBiff (32-bit) 3.6a is an mail notification package for Win95/NT. It can be used with UUPC/extended, FSUUCP, Waffle, Pegasus (PMail), Eudora for Windows, Novell MHS, Mini-Host, or PC-NFS. Other features include an alarm option, the ability to display a scrollable list of message headers, and more. WNBFF36A is the WIN31 version. Reg Fee \$15

FINANCE

MD400*

Mortgage Designer for Windows (32-bit) 4.00 performs fast and easy mortgage calculations in Win95. You can generate amortization schedules to screen, printer, or disk file, and can choose which payments are shown. Complex what-if calculations can be performed, and the principal, interest rate, term, or payment can be adjusted. Other features include tax and insurance calculations, a dynamic loan lifetime P&I chart, support for quarterly and yearly payments, and much more. Reg Fee \$39

WINFIN44

Financial Analysis for Windows 4.4 is a collection of financial analysis programs. It can perform calculations on mortgages, installment loans, bonds, T-bills, CD's, annuities, net present value, and more. Each module uses a simple fill-in-the-blank approach. A 386+ with 4 meg RAM is required, and VGA is highly recommended. Reg Fee \$39

GAMES

95CHRY44

Cherry Delight Video Slots for Win95 4.4 is a realistic video slot machine simulation with beautiful graphics, digitized sounds, and wheel spinning animation. The game includes nine spinning wheels and eight pay lines. There are also bonus spins and a progressive bonus pool. Reg Fee \$20

95HS33*

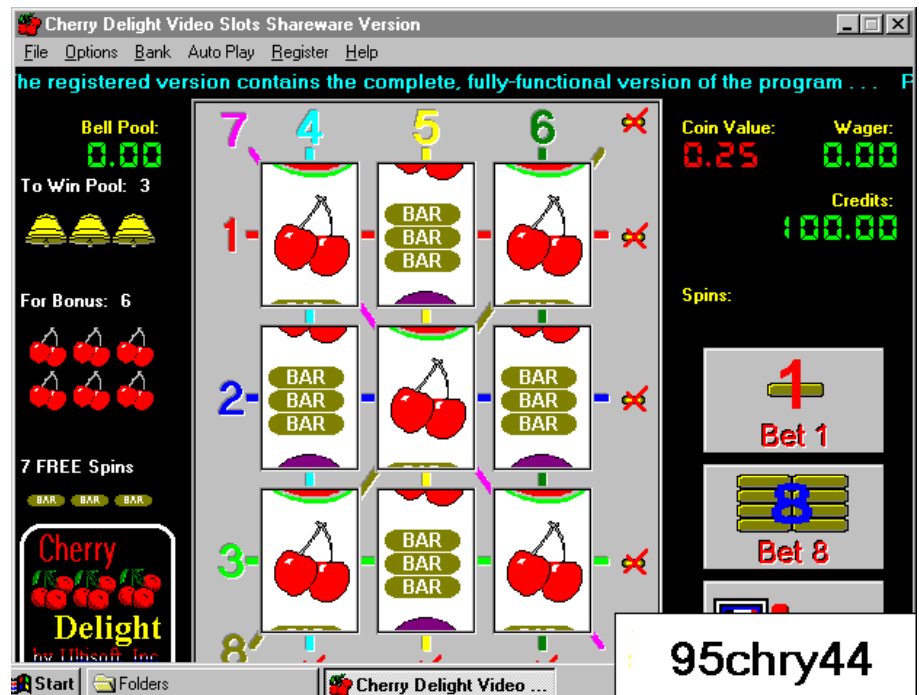

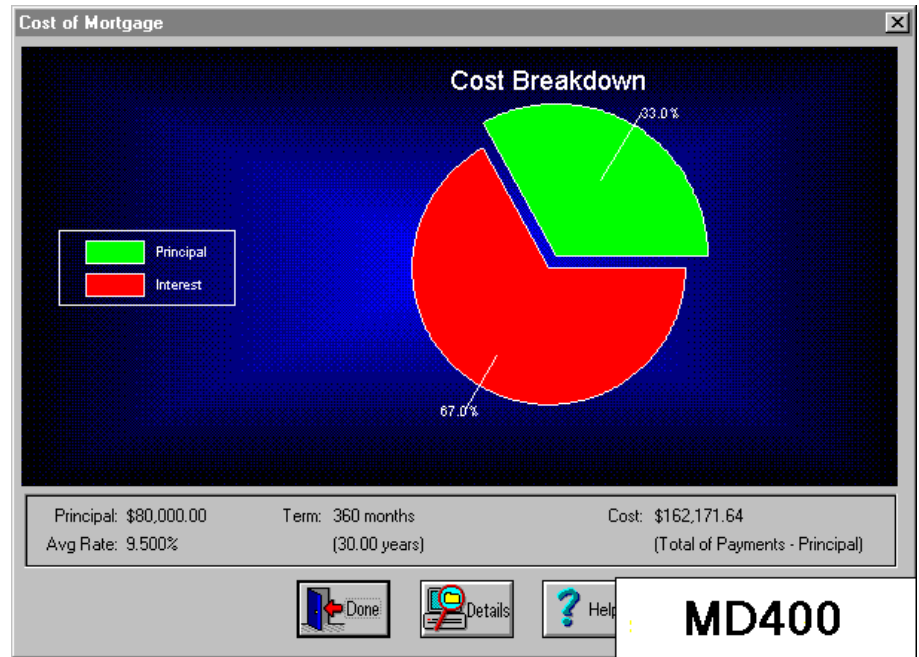

Home Stretch for Win95 3.3 is a horse racing and wagering simulation for Win95/NT where you read the past performances of all the horses in a race to make wise betting decisions. Features include realistic odds, bets (win, place, show, quinella, exacta), horse graphics, and track sounds. Requires: VB40032. Reg Fee \$20-\$30

AD12*

AlienDetector 1.2 is an amusing joke program for Win95 that will scan the immediate surroundings for Extra Terrestrial life forms. Reg Fee \$0

BSTAR32*

BattleStar for Windows (32-bit) 2.2 is a futuristic version of "Battleship" for Win95/NT. You must selectively bomb quadrants

where your scanners have detected hidden enemy vessels. You are provided with a specific amount of fuel and missiles, so every shot counts. Reg Fee \$0

CAN40*

Canasta for Windows (32-bit) 4.0 is a strategy card game for Win95/NT that you play against the computer or over the Internet. The included help file provides an introduction to this classic card game, as well as detailed rules. Other features include the ability to save and load games, a high score listing, selectable cardbacks, adjustable computer skill level, and more. Reg Fee \$20

WORDS11*

Words for Win95 1.1 is a 32-bit puzzle game that challenges you to spell selected words by maneuvering falling letters while avoiding various hazards. Features include excellent graphics, digitized sound effects, and a musical soundtrack. Requires a 486+, 8MB RAM, and 256-colour VGA. Reg Fee \$20

GRAPHICS

CHEMPEN

ChemPen+ 1.07 allows you to draw chemical structures that can easily be pasted into any word processor. It calculates molecular weight, molecular formula and elemental composition and includes a C-13 NMR calculator for saturated branched and linear hydrocarbons and a small expandable HOSE coded C-13 database for other types of molecules. Reg Fee \$39

DCWIN2

DRAFT Choice for Windows 2.0 is a powerful CAD package for Windows. Features include support for multiple attach points, 128 layers, Bezier/complex and spline curves, warp and tween, multilevel undo, parallel and perpendicular modes, DXF/PCX/WGP file support, and much more. Improved Undo command when used with polygons. Reg Fee \$59

DCAD23

DeltaCad 2.3 is a computer aided design program for Windows. Features include an easy-to-use tabbed dialog interface, context-sensitive help, sample drawings and libraries, support for up to 256 layers per drawing, and much more. This is suitable for everything from drafting and house plans, to business cards and signs. This is a 32-bit application, but Win32s is included for use on 16-bit systems. Reg Fee \$50

EZVIEWGT

EZ-Viewer 1.0 allows you to quickly and easily view and manipulate graphic files in Windows. This supports many popular graphic formats, including JPG, GIF, BMP, TIF, ICO, and WMF. Other features include the ability to browse all files in a directory, thumbnail view, printing facilities, the ability to zoom in/out, resize options, and more. Reg Fee \$29-\$39

GRAFER3

Grafer 3.0 generates graphs suitable for scientific and engineering reports. The line graphs and scatter plots are built from X-Y data entered from the keyboard, a text file, or the clipboard. The picture graphs can be copied to the clipboard and pasted into other applications as an adjustable graph. Saved graphs are in text file format, and printed graphs are adjustable in size. Reg Fee \$10

GRVP24

Graphics View/Print 2.4 helps you view, print, capture, convert, and resize picture files in Windows. This supports class conversion and file compression, and works with many different kinds of graphic file types such as BMP, PCX, TIF, GIF, JPG, PIC, RAS, TGA, PCD, FLT, CUT and more. Reg Fee \$100

GVPD34

Graphics VP Deluxe 3.4 helps you view, print, acquire, convert, and resize picture files in Windows. It supports class conversion and

file compression, and includes a gallery thumbnail utility. This supports BMP, PCX, TIF, GIF, JPG, PIC, RAS, TGA, PCD, FLT, CUT and more. Reg Fee \$15-\$20

MISCELLANEOUS

4LANG42*

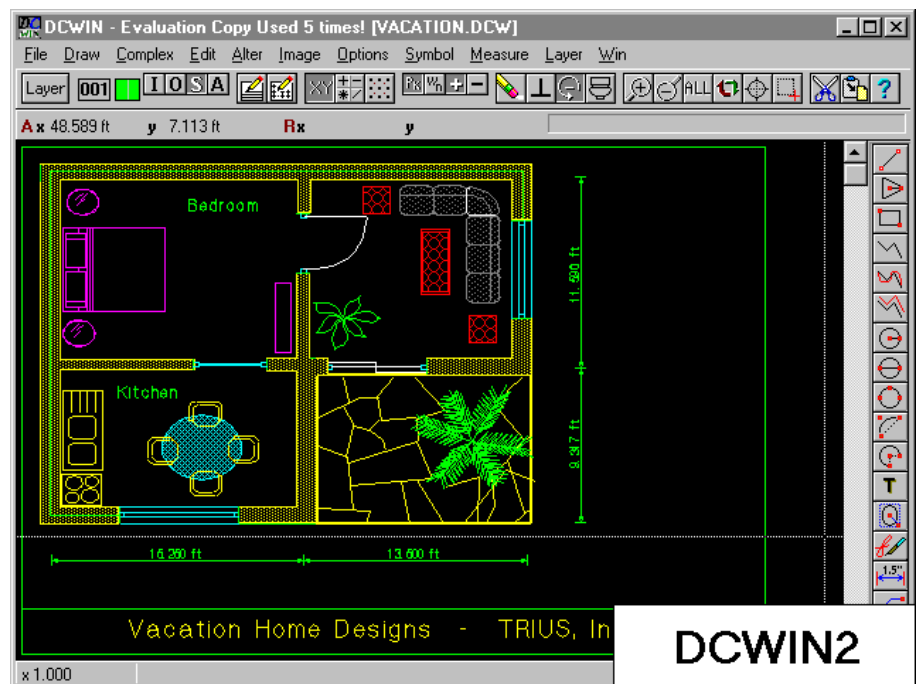

Ultimate Language Tutor for Windows 4.2 is a vocabulary learning and testing system for Spanish, French, German or Italian. New vocabulary words, verb conjugations, and phrases can be learned using an automated flashcard system. Once the student has mastered the new vocabulary, there are various tests available to test vocabulary proficiency. Any missed words or phrases can be reviewed automatically. Test scores can be saved to show results and progress. 954LAN43 is the WIN95 version. Reg Fee \$20

32PSLB10

PrimaSoft Label Printer (32-bit) 1.00 is a flexible utility for printing labels for Win95/NT with support for most common Avery labels. The Print Preview function allows you to see on-screen exactly how labels will look when printed. Data for labels can be imported from standard text files. Reg Fee \$20

ALARM300

Alarm++ (32-bit) 3.00 is an advanced desktop reminder system. Alarms can be set for a specific date, for specific days of the week,

and for certain repetition intervals. An adjustable snooze bar is provided for each message. Messages can have up to six lines of free-form text. Requires Win95. Reg Fee \$10

ADBPRO41

Address Database Professional 4.1 is a name, address, phone number, and label manager for Windows. It prints phone lists, address books, holiday lists, mailing and file-folder labels on any type of paper. Other features include an unlimited amount of free-form notes for each record, up to 10 customized fields per file, powerful search facilities, support for up to 100,000 names, and more. Reg Fee \$60

CALC95S*

Calc95 (32-bit) 3.4 is a 32-bit Windows scientific/engineering calculator with a wide range of built-in units conversions and physical constants. Reg Fee \$25

CALLCHEK

CallCheck for Windows 3.02 is an easy-to-use program for finding dialing codes for countries and cities worldwide. It contains a comprehensive database of over 5,000 US and international placenames and their area codes. You can find an area code by entering the city, state or country name, or find the location of any US or international telephone (or fax) number simply by typing in the number. Reg Fee \$20

DAT15_01+

Database Browser for Windows 1.50 allows you to edit, query, sort, and print Microsoft

Access 1.1, dBASE III/IV, FoxPro 2.0/2.5, Paradox, and Btrieve files. Records are displayed in a scrollable grid in which columns may be moved and resized with the mouse. Reg Fee \$50

HBCL80B

Hebrew Calendar for Windows 8.0b is a powerful tool for any person or organization needing knowledge of important Jewish dates. It covers a 300-year span from 1900-2200, Hebrew 5660-5960. Features include conversion of dates from Common-to-Hebrew or Hebrew-to-Common, the ability to print full month calendars with Truetype fonts showing both dates/holidays/sunsets, holiday lists for each year, Israel/Diaspora preference selectability, annual Shabbat Torah/Haftarah readings, selectable date formats, and much more. Reg Fee \$29

RHYMES10

Rhyme Finder for Windows 1.00 is a powerful rhyming dictionary for poetry authors. It provides single, double and triple rhymes for the 15 most used vowel sounds, organized by rhyme groups dependant upon the related consonants that are used. Reg Fee \$5-\$10

VL18C_16

Visual Labels for Windows 1.8c is an easy-to-use label design and printing package which allows you to create an unlimited variety of labels using text, pictures, boxes, ovals, lines, counters, and patterns in any font, colour, or rotation. This includes a comprehensive

database of Avery label and business card templates. Reg Fee \$43

WINPRO36

WinProof Grammar and Spell Checker 3.6 is an outstanding grammar/spelling checker for WIN31. It detects common grammar errors like dropped words, extra words, passive voice, subject/verb agreement, misused articles, double negatives, and much more. It is compatible with files created in WordPerfect, Word, WinWord, WordStar, PC-Write, etc. It features an interactive mode which lets you view each error as it is encountered with an option to correct the error immediately or write a comment to a report file. There is also a report only mode which quickly scans a document and writes the suggestions to a text file. This is a powerful package that can painlessly improve your writing. Reg Fee \$45

SCREEN SAVERS

AJ95V150*

Amazing JPEG Screen Saver (32-bit) 1.50 is a screen saver for Win95/NT that displays high-resolution JPEG images. Several sample images are included. AJPEG150 is the WIN31 version. Reg.Fee| \$17

CONGEN10

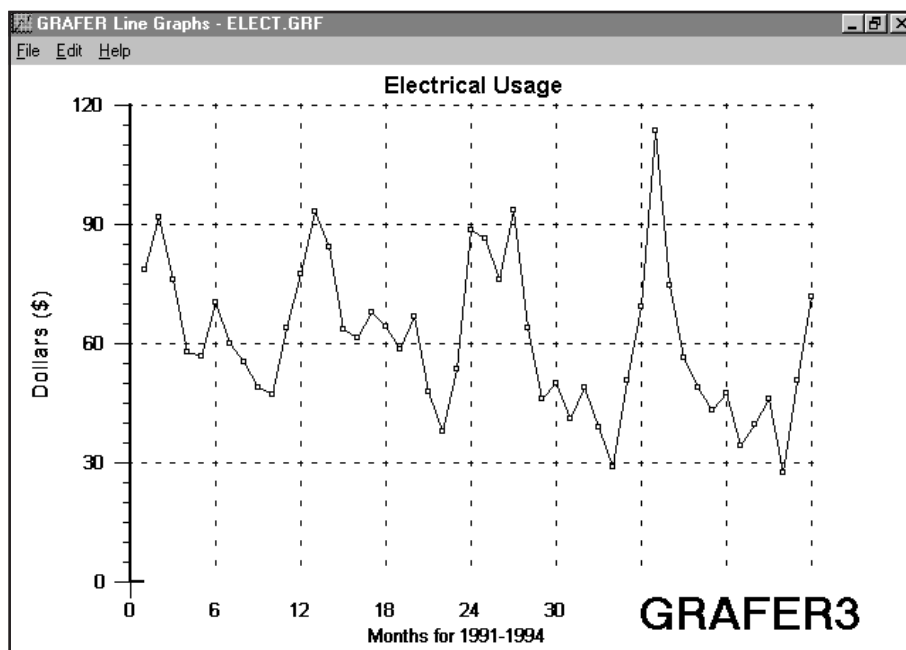

ConGen 1.00 is a suite of four screen-saver modules for Windows which produce contour patterns. You can change the contours, and the coloured strata into which they are cut, to produce an endless variety of fascinating patterns. Reg Fee \$15

GEOSS100

The Geometry ScreenSavers 1.00 is a set of fractal screen-saver modules for Windows. This provides an endless variety of Mandelbrot and Julia sets, dynamic systems, IFS codes, 3D stereograms, and more. A 486 with a 256-colour display is recommended. Reg Fee \$20

SCRNPX20

ScreenPix 2.0 is a WIN31 screen saver that will display any bitmap graphics files that you choose. You can customize it to show just the pictures you want and choose the duration that the pictures appear for. This can also be used as a slide show program. Reg Fee \$29-\$39

SNDPIX20

SoundPix 2.0 is a screen saver for Windows that displays graphic images and plays WAV audio files. Features include random play, user selected picture interval, password protection, audio on/off, and more. Reg Fee \$29-\$39

VENICE10

Venice Screen Saver 1.0 is a Windows screen saver module that displays graphics that simulate floating through the canals of Venice on your gondola as Italian music and the sound of splashing waves fills the air. Reg Fee \$29-\$39

UTILITIES

007W321D*

007 for Win32 1.0d allows you to password protect your Win95/NT applications. It modifies the original EXE file, so that every time you start the program, it asks for the password and will not run unless it matches. Reg Fee \$30

CAPPR32D

Capture Professional (32-bit) 2.51 is a versatile screen capture tool for Win95 that features nine capture modes (window, active window, client area, etc.) and the ability to capture menus and cursors. Nine graphic file formats are supported in 2, 16, and 16.7M colours. Other features include over 20 touch-up effects, format conversion, and more. This version prints a registration banner across captured images. Reg Fee \$?

CTCAL13*

CT Calendar 1.3 is a 32-bit desktop calendar for Win95. Requires VB40032. Reg Fee \$10

DLLCHK95*

DLL Check 95 is a DLL management utility for Win95. Features include the ability to create a log of all modules that load or unload in a session, the ability to search for duplicate modules, and a detailed information display for selected modules. Reg Fee \$80

FS95V13*

File Splitter 95 1.3 helps split large files so they can fit on a floppy disk. You can easily split files into sizes of 500, 1200, and 1400 KB. Requires Win95/NT. Reg Fee \$10

QUICKVAL

Quickval 2.03 takes numeric entries, converts them to text instantly, and copies the text to the Windows clipboard so they can be pasted into practically any application. This version

only accepts number values up to 999. Reg Fee \$10

QUIKTIME

QuikTime (16-bit) 1.1 allows you to start, pause, and resume timed events in Windows. It supports event naming, shows time even when shrunk to an icon, and keeps track of multiple instances. This version is time/usage limited. Reg Fee \$10

MORSPC95*

More Space for Win95 2.5 helps locate and delete file duplicates based on filename or name/date/size. Its output can be sent to printer or clipboard. This is a handy tool to help you free up valuable hard disk space. Reg Fee \$20

OMEGA12*

Omega Drive (32-bit) 1.2 is a powerful multi-function package for Win95. Features include archive management, program management functions, graphics viewing and manipulation, Internet encoding/decoding facilities, and much more. Reg Fee \$36

PASSGN60

Random Password Generator 6.0 will randomly select from a group of numbers, lowercase letters, uppercase letters and special characters or any combination and select passwords. You can create up to 2000 different passwords, using as many as 30 characters each. Reg Fee \$15

TBAVV

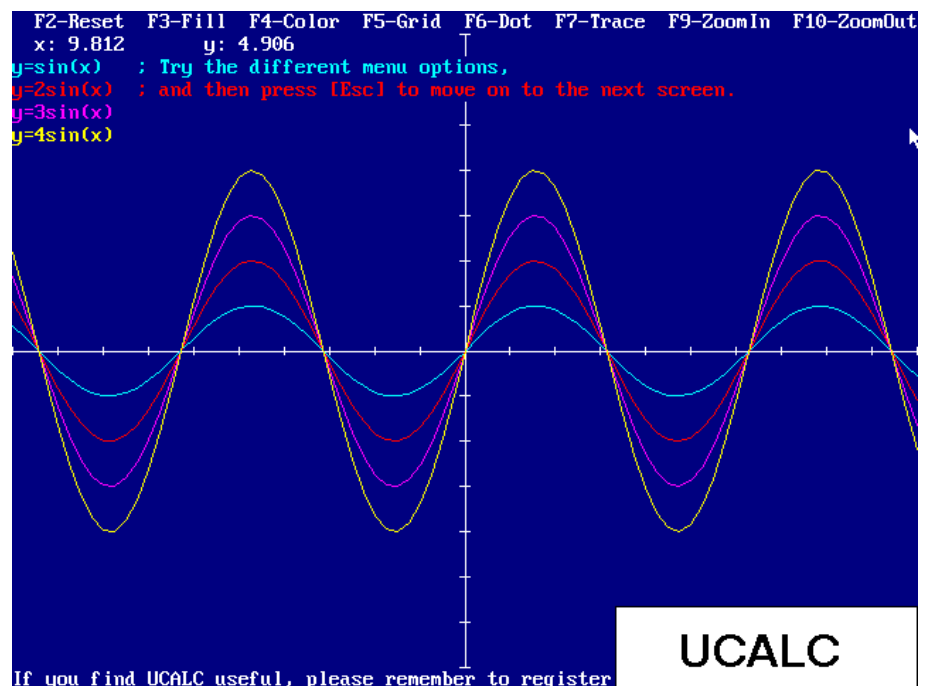

ThunderBYTE Anti-Virus for Windows 7.06 is a Windows front-end interface for use with the ThunderBYTE Anti-Virus Utilities version 6.05 or above. Now includes a version for DOS. ver 200 new signatures, increased detection rate, now able to locate macro viruses from everywhere in a document (even if macro is fragmented or encrypted). ver 200 new signatures, increased detection rate, now able to locate macro viruses from everywhere in a document (even if macro is fragmented or encrypted). Reg Fee \$125

TD19C_16

Things To Do 1.9c is a powerful, yet extremely easy-to-use task manager for Windows. You can keep track of an unlimited number of tasks, filter tasks by key word and date range, and print task lists with several options. Reg Fee \$20

WDLLFND2

WDLLFnd 2.01.12 helps you locate common routines used by Windows programs. It will find all Windows EXE, DLL, DRV and VBX programs on your computer and will display what routines a program uses, and also which programs use a routine. Discrepancies found during the search such as duplicate program names, DLLs found but not referenced, DLLs referenced but not found are displayed. A discrepancy list can be printed. Reg Fee \$25

NEW AND UPDATED DOS PROGRAMS

EDITORS

AURORA

The Aurora Editor 3.0c is a powerful and easy-to-use text editor. Features include file capacity up to 1 gigabyte, multi-window capabilities, full mouse support, syntax highlighting for more than 20 languages, a colourized macro language, an integrated file manager, undo-redo, Win95 long filename support, and much more. Reg Fee \$43

CE361

CMEditor 3.61 is a text file editor for large files. Reg Fee \$10

HRG60

HyperRead 6.0 allows you to convert ordinary ASCII text files to hypertext files. Can view a wider range of PCX files, including 16-colour 640 X 480 and 256-colour 320 X 200 pictures. Reg Fee \$25

PFS234

Print-Format 2.34 is an ASCII text format and print utility. It will format and/or print program source text files, translate character codes (e. g. from IBM-PC to ANSI codes), search and manipulate strings, extract columns out of tables, expand or compress tabs, count characters or words, and much more. Reg Fee \$15

GAMES

FRAMED12

Framed 1.2 is an arcade game similar in play to the Duke Nukem series. You must use the items you find in your cell to break out. Then find and use other items in your effort to escape. Avoid prison guards, dogs, and other pitfalls if you plan to get out alive. The game includes VGA graphics, and music and sound effects for Sound Blaster compatibles. Reg Fee \$23

GALCON51

Galactic Conquest 5.10 gives you the chance to conquer the entire galaxy, without leaving your chair. You start your game with one planet, some production resources, and a one-year head-start against your computer opponent. Then you can send forth immense armadas to squash your enemies like the bugs that they are. Reg Fee \$?

GTM21

Get The Message 2.1 is a word puzzle game. The objective is to guess the message that is created by small squares randomly appearing on the screen to form the block letters that comprise the message. Over 200 puzzles are included. Requires 386+, 1.2 MB of disk space and a colour monitor. Reg Fee \$14

HOTEL

Hotel California is a text adventure game inspired by the 1970's Eagles song "Hotel California", where you will explore a strange hotel in the desert in an effort to escape. Reg Fee \$0

MISCELLANEOUS

ASA57

As-Easy-As 5.70 is a powerful, 1-2-3 compatible spreadsheet program. Its capacity is 8,192 rows by 256 columns. Features include spreadsheet linking; many graph types; the ability to export graphics in PIC format for importing to word processing and DTP programs; a structure that will allow development of Add-In's (some of which are included on this disk); the ability to import and export dBase compatible files; many Time, Financial and Statistical functions; string handling functions, including lower/upper case conversion, concatenation, trimming, string comparisons, look-up string tables and more; user-definable functions; expansion of the macro buffer to 2k; HP LaserJet and 24-pin printer graphics support; cell auditing, which lets you point to a cell and have all other cells which are linked to it be highlighted; the ability to save default settings; file merging options; graph data labels; the ability to display negative amounts in a different colour; mouse support; and much more. Reg Fee \$69

AVSCAN

AVScan 3.07 is a freeware scanner that can detect more than 4500 virus signatures. Reg Fee \$0

COELI377

Coeli Electric Planisphere 3.77 combines practical ephemeris and planetarium with a real-time star chart to provide a Super VGA model of the skies as seen from Earth. You may view the heavens from any place or time with advanced star/constellation search inside a point and click interface. A separate VESA driver must be pre-installed. Reg Fee 12 Pnds.

EB108

Easy Base 10.8 is a relational data management system. It will allow you to create forms, using fields that can be linked to data from other forms. Fields can also be used as cells, similar to spreadsheet programs, allowing you to perform math functions on them. It also includes several options for generating reports. This program can be useful for programming applications for users who may not have any database training. Supports multiple users on a network. Reg Fee \$15-\$199

UCALC

Ultimate Calculator 3.2 is an 18-digit scientific calculator. It can evaluate expressions, solve equations, perform numerical integrations and do summations. It also features flexible notations such as SQR or SQRT; a line editor with expression recall; decimal, hexadecimal, binary and octal notations; radian, degree, and gradient modes for trig functions; arithmetic, bitwise, and relational operators; hyperbolic functions; common functions such as factorial or absolute value; user defined functions and variables; and adjustable fix notation. SR mode, menu for graphing, ability to add text to the graphic screen, and built in support for MCGA. dded functions to mouse control, equation solver can now display multiple answers. Reg Fee \$25

UT

Learn Typing helps typing students learn by watching the display instead of the keyboard. A diagram of a blank keyboard is displayed in the upper part of the display, and a key label blinks when you are ready to learn the key's position. Key labels of keys you have learned will be displayed continually as you progress through the lessons. Reg Fee \$25-\$35

Medical

The Merck Manual and website has 2,700 pages of detailed medical information and has been published every 5 years since 1899. According to our Dr Mac "It is an excellent general medical reference book and is the one up to date book I keep in the house for my own use". It claims to be the most widely used medical book in the world except for obscure diseases. "If your disease isn't in this book you are healthy!" <http://www.merck.com>

Pharmaceutical
Information
Network

PharmInfoNet leads the way On the Internet with up-to-date, free and accurate drug information and serves as the primary entry point into the World Wide Web for health professionals and patients who are seeking high quality information about drug therapies and medical information. An award winning site.

<http://www.pharminfo.com/>

Defence

The Australian Defence Association is a non-partisan group of citizens from all sectors of the community who seek to promote interest among all Australian in the security of their own country.

They also publish a Quarterly Journal *Defender*. <http://netcore.com.au/~ada/>

Pope John Paul II

This web site provides an interesting and historical insight into the most travelled Pope in the 2000 year history of the Roman Catholic Church.

<http://www.zpub.com/un/pope/>

Music

The Down Under Midi Files collection has hundreds of quality midi files all complying with GM(general midi) standard. It is also free. Currently due to copyright issues the collection is unavailable, but they expect to be back in February 1997. Well worth checking for their return.

THE INTERNET PROJECT

By Iain Gould

Well, what a month it's been. By the time you read this, and with any luck, the TIP admin team will have completed:

- The installation of the extra 12 dial-in lines
- The elimination of the temporary Macrolink connection and replacement with a real interface card in the AS5200
- The cut-over to higher link bandwidth, doubling our throughput to the wider Internet
- The implementation of the new charging model including re-working of the accounts processing scripts
- The consolidation and elimination of expired / suspended accounts, and
- The installation of a Quake World server

I am now faced in the last hours before the magazine deadline with the task of writing this month's TIP News. No, I am not after sympathy, just forgiveness if this month's article is somewhat brief.

I would like to thank all users of TIP for bearing with us over the past few months whilst we have experienced our congestion problems. If the amount of renewals that were processed in January were any indication, you have all shown a great deal of patience and faith in the administration team.

Also, the acceptance of the unfortunately necessary cost increases and charging scheme changes is heartening. The costs of operating TIP have increased literally ten-

fold over what they were last year. Some of this can be attributed to our expansion and upgrades, but a large portion is also due to changes in the way Internet Service Providers are charging for access.

Not only has the price of Internet bandwidth increased, but for a permanent connection such as TIP has, most (if not all) upstream ISPs are now implementing volume charging schemes. This means that we pay a fixed fee for a certain amount of bandwidth, and if we transfer more than that amount of data across our link in a billing period, we pay extra. As the flat rate covers us for about 50% of our link bandwidth, we are sure to end up paying excess fees.

I am also going to take this opportunity to re-emphasise the importance of newsgroups as a means of communication on TIP, and a source of much information and assistance also.

There are currently four main newsgroups for TIP:

tip.announce

where official messages from the IPMC and TIP admin team are posted

tip.help

a forum for discussing problems and solutions with your Internet connection,

tip.pcug

for PCUG specific discussion and, dare I say it, grandstanding, and

tip.general

which, as the name suggests, is the place where much discussion, argument, meaningful dialogue, and esoteric ponderings take place.

[hey, what about *tip.coffee-chat?* -ed]

Usenet can be a formidable place to be. As a relative newcomer to the world of the Information Super-Hype-way (less than 2 years), I can well understand the reticence with which new users approach them.

I am in the process of writing an all encompassing treatise on Usenet, and in particular the reader Free Agent that allows off-line 'browsing' of newsgroups. Stay tuned.

Finally, I would like to extend a heartfelt thanks and farewell to Chris Scarvell who retires from the tip.accounts team to regain some of his own personal life back. Practically every week for the past 18 months or more, Chris has been processing

Beware The Ides Of March

We are about to delete all accounts on The Internet Project belonging to people who are over three months overdue on their PCUG or AUUG membership. All access to the Internet Project will be lost, all data associated with the accounts will be destroyed, and no refunds of any sort will be paid.

This will be happening on or about 15 March 1997.

So if you are unfinancial with the PCUG or AUUG, get your membership fees in now! And if you know someone who might be in this situation, let them know in case they miss reading this.

applications, renewals, and alterations of the 2500 users of TIP. It isn't an easy job, nor does it have many rewards, so let's hear it for Chris: Yay!

For this month's closing witticism, I will quote a phrase that I think is quite apt in the world of the Internet. From the well-known test cricketer Albert Einstein: "Imagination is more important than knowledge..."

Until next time.

Twelve new modems for TIP (upper left of board)

(...continued from page 5)

Dear Cliff

The changes were not arbitrary; since 1 February 1996 all payments have been for a period of access (typically one year) or a number of hours (typically 300), whichever came first. This system has been discussed in depth since late 1995 when the changes first became necessary.

Ample advice and notification of that change and the changes on 1 February 1997 were given in Sixteen Bits, in tip.general and most recently in personal email to all TIPsters.

You are not being penalised. You have received for your money precisely what was offered - one year of access or 300 hours whichever came first.

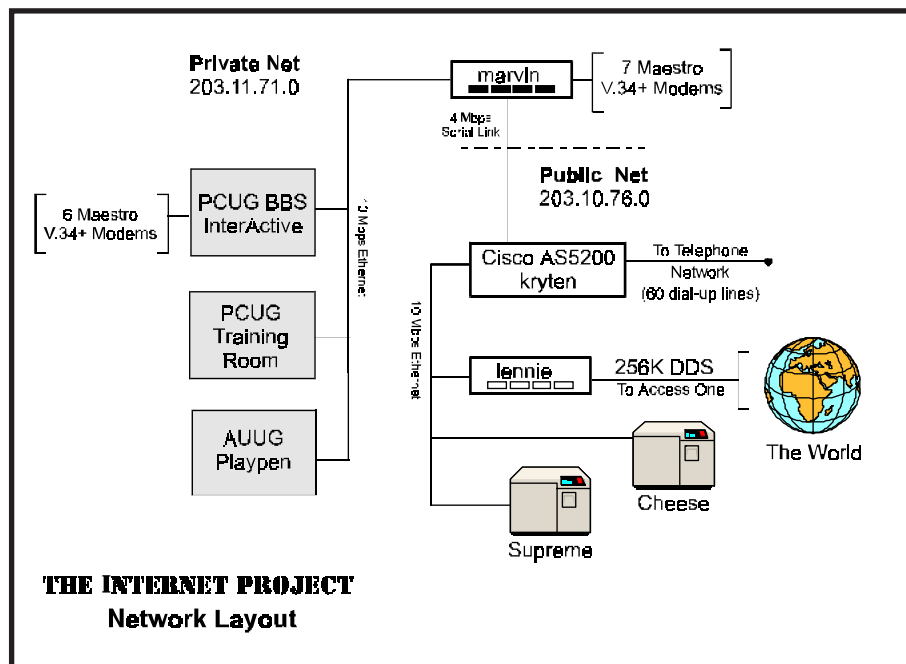

There is no hidden agenda - the reasons for the changes have been given numerous times and I will not rehash them here. It is hard enough finding the time to run TIP without having to deal with accusations of having something to hide or of doing it for some (unspecified) personal gain. If you have any evidence of any TIP admin person getting in-appropriate personal pecuniary advantage from their work with TIP, by all means present it.

Yes, your membership fees built TIP - so did mine. On the other hand it was my hard work that built TIP, and the hard work of several other people, many of whom are still giving substantial amounts of their time to the Project.

I will leave the Treasurer to comment on your other claims/questions, but I will note that an independent auditor has not once but twice affirmed that the accounting methods we use are appropriate and acceptable.

TIP is a fantastically useful thing. Perhaps it is testimony to its usefulness that people get so passionate about what it should be and how it should be run.

Regards, Karl Auer
The Internet Project Management Committee

The INTERNET Project

Important Notes - Please Read

1. Access to The Internet Project is governed by the Internet Project Acceptable Use Policy, copies of which can be obtained at the PCUG Centre, or downloaded from the PCUG BBS or from The Internet Project.
2. There is a limit of one Internet account per non-corporate membership. Corporate members may sponsor up to three individuals, who are then personally responsible for the operation of their accounts. Please complete one application for each person.
3. Part of your email address will be determined by the principal organisation. If your membership of that organisation expires, so too does your membership of The Internet Project. In this event, no refunds for unused allocation will be made.
4. The Internet Project reserves the right to alter prices and services offered at any time. Fees paid for Internet access are non-refundable and non-transferable.
5. Note: Hours debited do not necessarily equate to real hours on-line; time allocation will be debited in a non-linear fashion depending on the amount of time spent on-line in any given day. The debit rate is set from time to time by the Internet Project Management Committee.
6. Basic Access
 - a) Basic Access provides non PPP email and news only.
 - b) Basic Access is free on application.
 - c) In any calendar year, calculated from the date of application, Basic Access provides up to 100 'hours' usage.
7. Advanced Access
 - a) Advanced Access includes full access to the Internet using SLIP/PPP.
 - b) Advanced Access is not free. Current rates are \$120 for one calendar year of access with up to 300 'hours' usage.
 - c) When your Advanced Access subscription expires OR you use 300 hours of access (whichever is earlier), you will be required to purchase another subscription for one calendar year from that date.
 - d) Advanced Access users also receive a Basic Access allocation - see above.
8. All users joining The Internet Project receive a one-off, free five hour allocation of Advanced Access.
Collecting Your Login Details
9. A waiting period of two months applies to new members of the PC Users Group (ACT) Inc.
10. For existing members, please allow up to two weeks for your application to be processed.
11. Login details can be collected - in person by the applicant - from the PC Users Group Centre. We recommend that you phone the Centre first to check that the details are waiting for you.
12. You (and your parent/guardian if you are under 18 years of age) will be required to sign an Acceptable Use Policy Declaration when you pick up your login details. Photographic proof of identity may be required at that time.

Member Services

These special offers and services are only available to PCUG members. Please bring your membership card with you when collecting orders.

Disks & Tapes

We offer high quality disks and tape cartridges in various formats at very reasonable prices.

Disks & tapes are available from the PCUG Centre Monday, Wednesday & Friday 10am to 2pm or between 9am and 5pm on weekends.

BBS Access

New members wishing to access the PC Users Group (ACT) InterActive Bulletin Board Service (BBS) should dial (06) 253 4933 and create an account on the system. Once the main menu is presented, select the 'Goodbye' option followed by the 'Yes' option to leave a message to the Sysop.

In this message state your membership number (from your card or magazine address label) and request an access upgrade. This will usually occur within a few days.

Shareware

Members have access to a huge selection of "shareware" software. The PCUG subscribes to a CD-ROM which provides over 250 Mb of new and updated software titles on each monthly CD.

One complete section of the permanent library is also contained on each CD-ROM. In addition, there are many programs on the PCUG BBS which members have uploaded or which come from other sources.

This software is provided as "shareware". If you continue to use it, you must register the software with the author. The Group does not "sell" the software - it charges a fee to cover the cost of obtaining the software, maintaining the library and copying the software to the member.

Computers are available at the Centre which are connected to the BBS enabling members to download software.

Hardware & Video Library

The hardware and video library is located at the PC Users Group Centre. Items may be collected and returned on Saturdays and Sundays between 9am and 5pm (loans are for one week). Please bring your membership card with you.

The library provides access to equipment which members would not normally have readily available. Most items have instructions manuals and software where appropriate. Modems do not include software; check the Shareware Library for suitable packages. Items may be borrowed for one week. There is no charge, but you must collect and return the items yourself.

Equipment available includes

- modems
- soundblaster card

Videos include

- Developing Applications with Microsoft Office
- Using Windows 95

NOTICE OF SPECIAL MEETING

Monday 28 April 1997

(to be held at 7.30pm prior to the normal April main meeting)

The Special Meeting is to consider and vote upon the following changes to the rules of the PC Users Group.

Rule 17(1)(b) - [Nomination of candidates for election as office-bearers of the Association or as ordinary Committee members] shall be delivered to the Secretary of the Association no later than the last Friday in the July before the date fixed for the annual general meeting at which the election is to take place.

Rule 17(2) - If insufficient nominations are received to fill all vacancies on the Committee, the candidates nominated shall be deemed to be elected.

Rule 17(3) - A vacant position remaining on the Committee shall be deemed to be a vacancy for the purpose of Rule 16(4).

Explanatory notes:

These changes will permit publication in Sixteen Bits of all valid nominations received to enable the membership to give serious regard to the nominations received. They will also permit all members nominating for the committee to have an opportunity to consider and reflect upon their intended commitment to the committee and to the Group.

Hugh Bambrick

Secretary PC Users Group (ACT) Inc

W h A T' S

NEWS

Compiled by Jim Hume

There has been much discussion within the Group about Microsoft Windows 95 OEM Service Release 2 (OSR2) which is an updated version 950b of Windows 95. It is a product for PC manufacturers (OEMs) to preinstall on new PCs. It contains some new hardware support and programs, but at its core it is Windows 95.

Microsoft in a Technical Bulletin said:—"The purpose is to allow PC manufacturers (OEMs) to install an integrated Windows 95 product that contains the latest available individual updates and supports recent advances in hardware that requires core operating system support.

The retail version of Windows 95 is designed to upgrade 3.x PC's. The primary contents of this service release are intended to support new hardware. As such, it is only being sold with the PC's that have these new hardware capabilities. The only major feature that does not require specific hardware support is the new version of Microsoft Internet Explorer.

A retail Windows 95 (version 950) installation cannot be upgraded with Windows 95 OSR2. (My emphasis.)

At this time, there are no plans to make these features available in a step-up, service pack, or upgrade kit for Windows 95. There will be no free support for Windows 95 OSR2 from Microsoft and they will offer only fee-based support on this product.

The following new enhancements are included with Windows 95 OSR2:

File System: Fat32 File system; real- and protected-mode tools for FAT32LFDISK, Format, ScanDisk, and Defrag; Updated drive properties (to indicate whether a drive is FAT 32); Scandisk autolaunch;

DriveSpace 3, including the compression tab for the drive properties and Compression Agent for Microsoft Plus! for Windows 95; CDFS Enhancements.

Internet. Internet Explorer 3.0, Microsoft Internet Mail and News; Internet Connect Wizard New Meeting; Microsoft Peer Web Server.

IOS(disk sub system) Drive spin down support (see "Power Management" section); 120MB floptical support; IDE busmastering support; Removable IDE media support.

Display: Control Panel Display tool enhancements; Open GL support and screen savers.

Multimedia. DirectX 2.0; Active Movie.

Online services: AOL, Compuserve and WOW clients included in desktop folder; MSN, the Microsoft Network, client software version 1.3

Networking: Updated Vredir.vxd file; NDIS 4.0; NDIS 4.0 miniport drivers; TCP/IP Multihoming support for LAN/WAN and LAN/LAN.

PCMCIA: PCCard32; Enhanced socket services.

Power Management: APM 1.2 support: wake on ring, Control Panel power properties, and multiple-battery status. Support for drive spin down on computers that do not support APM-; PCMCIA modem power management; improved power savings when idle.

Printing and Faxing: Lpt.vxd: Support for Iomega devices; Updated Helwtt-Packard LaserJet 4 driver (grayscale fonts); WANG Imaging Program and Fax Viewer with Twain32 support.

Dialup-Networking: Unimodem/v; New User Interface including dialling configuration options in Dial-Up Networking folder and built-in scripting; New modem info files; New TAPI dial codes.

Wireless Communications: IrDa LAN; support for LAN access point.

Microsoft Exchange/Windows Messaging: Windows NT 4.0 messaging system client; Renamed from Microsoft Exchange to Windows Messaging System; MAPI 1.0b; Performance improvements; Faster MailTo on 8MB computers.

Miscellaneous: Daylight Savings Time and time zone updates; Updated user interface for hardware profiles."

Corel has begun shipping Life Science Mysteries: **The Green Files** an educational game designed to teach children aged 9 to 16 the structure of cells and the effects of the environment on organisms.

Join the crew of the *Blue Whale* ship and dive into a fascinating microscopic world. As you work your way through six different learning modules, you'll uncover clues to help you carry out two important missions. Your goal is assess and analyse the effects chemical spillage can have on the environment. Learn how organisms are affected by such incidents and intriguing facts about the life cycle of cells.

It features four 3D-rendered areas to explore and work in: the office, the laboratory, the storage room and the diving area. Two challenging missions: Oil Spill and Gemco Disaster and a Learn Zone interactive textbook with six scientific learning modules containing diagrams, animated exercises, a self test and more.

It teaches the relationship between science and technology-The scientific method

including hypothesis, observation, experimentation and conclusion and Problem solving skills.

Minimum requirements are an IBM compatible 486 DX33 PC, Windows 3.1x, 8MB RAM, 4MB of free hard disk space, a double speed CD-ROM drive, 8-bit audio capabilities and a 540x480, 256-color graphics display. Suggested retail price \$A 79.00

Electronic Publishing on CD-ROM by Steve Cunningham & Judson Rosebush is a three hundred and eighty page "how-to" guide to publishing electronic titles on CD-ROM from an authors initial idea, through detailed design and authoring, to manufacturing, marketing and distribution. Based on the authors experience the authors prepare the reader for an informative journey into the realm of electronic publishing. \$US 36.95 includes Book and CD-ROM from O'Reilly and Associates Inc 103a Morris Street Sebastopol CA 95472 USA Fax 707-829-0104

Internet Relay Chat IRC

There is a new IRC network in Australia called AUSTnet. This net has expanded to Canada, Britain and the United States and provides international server coverage. AUSTnet servers are located on a number of international backbones including Access One, SprintLink, Digex, Telstra and connect.com.au.

The Australian server is au.AUSTnet.org. There are wide variety of channels listed and services include ability to reserve and register nicks. There is a home page at <http://chatzone.base.org>.

Meetings

The March 1997 Meeting of the Canberra Branch of the Australian Computer Society(ACS) will be held on Wednesday 19 March at 7.30PM at Room N101, Computer science and Information technology Building (Building No. 108) North Road, Australian National University. Speaker Peter Kalkman, MACS, Manager Computer Systems Support, Attorney General's department. Topic: Windows NT Integration into an existing environment.

<http://www.pcug.org.au/~afreeman/acs.html>

Seniors Card New South Wales

The ACT Government appears to have under consideration a similar site and is currently conducting Telephone Surveys in conjunction with ACTEW. This NSW site does cover some of the Major retailers in the ACT and has Seniors Card News a weekly issue on Seniors Card participants, special offers, and Seniors events as they happen. Ipex in a Seniors card initiative, have designed computer systems for Senior Card members. Well worth a look if only to press the ACT Government to put their Seniors Card information on line now.

<http://www.seniorscard.nsw.gov.au>

"Backer novel hard disk back-up device romped home like a two-year-old on steroids" according to the Magazine *PC Format*. Realising that not everyone can afford a tape streamer, Danmere has developed Backer, an ingenious device that enables you to back up your hard drives's contents to a domestic video recorder.

Backer can stuff a surprisingly large 1.5Gb of data onto a single three-hour VHS tape. When you consider that most budget tape streamers can handle no more than 680Mb per tape, Backer seems just to be good to be true.

Reliability is obviously a very important issue as well, and surprisingly, Backer passes this test with flying colours too... the software's built in error correction routines can cope with any mistakes that get through.

"So what's the catch?" we hear you ask. Well try as we might, we can't find one - even Backer's top transfer rate of 9Mb per minute runs rings around the 1.8Mb per minute most tape streamers can manage."

Advertised in Paw Catalogue Page 26 for \$139 Phone 1800 677 729. For more detail see <http://www.danmere.com/backer.html>

AT&T in a joint announcement with Microsoft launched WebPresence, which it is claimed is a fast and easy way for Australian businesses to get on the Web. The AT&T WebPresence package includes staging and hosting space on a secure server, a company specific website address, a monthly analysis of site visitors, Internet access, an Internet e-mail address and Microsoft FrontPage Software, for a fixed annual fee. AT&T WebPresence is offered in Australia by AT&T EasyLink Services, headquartered in Sydney <http://www.att.net.au> or from Phil Meyer, Microsoft Sydney Phone 612-9870 2921 Fax 612 98051108 philme@microsoft.com

AMD have announced that Vantis Corporation will be the name of its programmable logic company,

It is being formed to better serve the specialised requirements of programmable logic products, taking advantage of AMD's advanced process technology and wafer manufacturing capabilities

Vantis will to utilise AMD's worldwide Distributors and receive administrative support functions from AMD. For further information see <http://www.amd.com>

Special Interest Groups

The Internet SIG

This a get together of those members of the PCUG who love to explore the Internet for interesting sites, new Internet tools and novel applications. It holds an informal meeting once a month on the first Thursday (January excepted), at 7.30pm. The meeting has no set agenda but free flowing chat on various Internet related topics and events. On occasion, we had presentations of interesting software. Among topics that are discussed from time to time are the upgrade of TIP, cable and wireless access to the Internet and the regulation of the Internet. The web page for the SIG is at: <http://www.pcug.org.au/~ejoseph/intsig.htm>

Bytes

The Bytes SIG is designed for those who like to talk about computing over a meal. It meets from 6 pm at the Asian Bistro, Australian National University Union, on the PCUG meeting nights. There are no Bytes SIG meetings in November, December, or January. Contact person: Andrew Freeman Phone: 258 7411 Email:

afreeman@pcug.org.au or WWW at <http://www.pcug.org.au/~afreeman/cvsig.html>

AutoCAD

Geoffrey May 295 5942 Monday-Fri 4-5pm. Please call for details.

CC++

Peter Corcoran . peterc@pcug.org.au 2nd Tuesday 7.30pm PCUG Centre

GUI Developers

Peter Harris 287 1484 pharris@pcug.org.au Please call for details

The OS/2 SIG

An enthusiastic forum for those operating or interested in OS/2 Warp. Meetings include wide ranging discussion and interesting hands on demonstrations. Meetings are held on the third Thursday at 7.30pm for 7.30pm at the IBM Building 8 Brisbane Ave, Barton. Contact David Thrum Phone 201-8806 (bh)

The Delphi SIG

A lively forum for software developers who are working with or interested in Delphi. Our meetings include wide ranging discussion and interesting hands-on demonstrations. Come and see why Delphi is RAD! Some of our recent meetings have discussed design patterns, undocumented tips and tricks, serial communications, Delphi components, best shareware tools, database applications, and HTML tools. Meeting 2nd Monday of each month at PCUG Centre. Convenor James Heyworth Phone 273 2100. Email Jamesh@obsof.com <http://www.obsof.com/>. You can also subscribe to the PCUG Delphi Mailing List by sending message "subscribe act-delphi-

l@pcug.org.au <your email address>" to act-delphi-request@pcug.org.au

Linux User Group

Stephen Rothwell 291 6550 (ah) Stephen Rothwell @ canb.auug.org.au 4th Thursday 7.30pm Room N101 Computer Science Dept ANU.

Networks

Garry Thomson 241 2399 gthomson@pcug.org.au Thursday after main meeting Please call for venue.

Computer and Vegetarianism

This SIG is designed for those who have an interest in both computers and vegetarianism. It generally meets with the Bytes SIG. No meetings are held in November, December, or January. Contact person: Andrew Freeman Phone: 258 7411 Email afreeman@pcug.org.au or WWW at <http://www.pcug.org.au/~afreeman/cvsig.html>

The Coffee and Chat Group meet at the PCUG Centre in Belconnen on alternate Tuesdays from 10.30am to 11.30am with another 30 minutes to 12.00 for those who want to stay. The dates of these meetings are shown in the Calendar of Events. On the alternate Tuesday a virtual Coffee and Chat Meeting is held on the Internet at 10.30am using Internet Relay Chat (IRC) address irchost.pcug.org.au Port 6667. Full details about the online meetings can be obtained from <http://www.pcug.org.au/~ejoseph/vcc.htm>.

Convenors are requested to email any changes in contacts or venue and additional information about the activities of their group by the first Friday in the month of publication to topcug.editor@pcug.org.au. A small logo would also be appreciated.

Training News

by Paul Balnaves

Please refer to the December issue of *Sixteen Bits* for a full discussion of the rationale of the planned training program for 1997.

The training program for 1997 is herewith. It is settled, subject to ongoing adjustments in the light of developments.

Note the heavy emphasis on Internet courses. This reflects the clear demand of members at the moment. A number of days are designated 'TBA'. These days allow for the introduction of Internet related courses as discussed last month, including home pages, MS Internet Explorer, Web tips and tricks and so on. They also allow for possible courses on the Web oriented MS Office 97.

Course content for Internet courses is still under development, and subject to meetings of trainers.

In addition to the weekend courses, a range of short evening courses, mainly Internet related as above, will be introduced. These are still in the planning stages.

Contacts

Course bookings: Petra Dwyer, at the PCUG Centre on 253 4911.

Training coordinator and course information (not bookings): Paul Balnaves, 241-4671 (h) 7.00pm to 9.00pm, 282-3488 (w)

Microsoft Product courses (not bookings): Michael Lane 242-9278 (h) 7.00pm to 9.00pm

All courses are held at the PCUG Centre, Northpoint Plaza, Belconnen - maximum 8 people.

Courses cost \$35 unless otherwise indicated. Full day courses run from 9.30am to approximately 3.00pm. AM Courses commence at 9.30am. PM courses commence at 1.30pm.
