## **ADSL Alarm Panel Splitter – EM1790**

If a security Alarm with telephone line monitoring uses the same telephone line as the ADSL service then an EM1790 ADSL Alarm Panel Splitter must be installed in addition to the ADSL modem to allow the one telephone line to be used for both a security alarm and ADSL service.

The ADSL Alarm Panel Splitter must be mounted on the incoming line, and all other telephone devices connected after it. The EM1790 will allow the use of one telephone line simultaneously for Voice, operation of the security alarm and ADSL services. The EM1790 minimises Voice Band Interference and eliminates the need for additional micro filters on each analog phone device such as phone extensions, fax machines and telephone answering machines, as well as allowing the security service to operate.

To order an EM1790 ADSL Alarm Panel Splitter please fill in the number “EM1790” in the “Netcomm ADSL Device” box at the bottom right of the ADS: Application Form.
